RE: Polychlorinated Biphenyls (PCBs) Remedial Action Report
Orville H. Platt High School
SDE Project No.: 080-0093 RNV/E
220 Coe Avenue, Meriden, CT
Fuss & O'Neill EnviroScience Project No. 20111127.A3E

Dear Ms. Woodward:

Enclosed please find the remedial action report for the polychlorinated biphenyls (PCBs) remediation project completed at Orville H. Platt High School, in Meriden, Connecticut. This report summarizes the PCB abatement performed during Phase I renovation and relates to the removal of PCB-containing caulking compounds associated with windows along the Chorus/Band Room area (>50PPM), back side at pool area associated with overhead doors (asbestos containing material and PCBs < 50 PPM), and waterproofing mastic outside of the Chorus/Band Room area (< 50 PPM) to satisfy EPA requirements.

If you have any questions regarding the enclosed report, please do not hesitate to contact us at (860) 646-2469. Thank you for this opportunity to have served your environmental needs.

Sincerely,

Carlos Texidor
Project Manager

CT/kr

1 Introduction

Fuss & O'Neill EnviroScience, LLC (EnviroScience) was retained to provide construction administration services for the Town of Meriden related to the remediation of polychlorinated biphenyls (PCBs) at Orville H. Platt High School, 220 Coe Avenue, Meriden, Connecticut.

This report has been prepared in accordance with the United States Environmental Protection Agency (EPA) approved Self Implementing On-Site Clean-up and Disposal Plan (SIP) and with the requirements of Condition 19 of the approval granted by the EPA for cleanup of PCB-containing and PCB-contaminated materials pursuant to Title 40 of the Federal Regulations (CFR) 761.61 (a) and 761.79 (h), dated May 18, 2013. This report presents data supporting the attainment of the remedial objectives pertaining to the PCB-containing and PCB-contaminated materials for the project.

This remediation project involved the removal of PCB-containing window caulk associated with phase-I renovation project (Chorus/Band Room area PCB's >50PPM), PCB- containing caulking compound associated with overhead doors (ACM& PCB's<50PPM) in back side at pool area, and waterproofing mastic outside of the Chorus/Band Room area (PCB's <50PPM), to satisfy EPA requirements.

The SIP, also referred to as the Notification, was prepared by Fuss & O'Neill EnviroScience. A copy of Notification is provided in *Appendix A*. The General Contractor was O&G of Torrington, Connecticut. The PCB Remediation Contractor was Yankee Environmental Services of Billerica, Massachusetts.

1.1 Remedial Action Project Limits

The overall remedial objective was to address PCB-containing window caulk associated with phase-I renovation project (Chorus/Band Room area PCB's >50PPM), PCB- containing caulking compound associated with overhead doors (ACM& PCB's<50PPM) in back side at pool area, and waterproofing mastic outside of the Chorus/Band Room area (PCB's<50PPM)..

1.2 Remedial Action Project Objectives

The objective of the project was to remove PCB- containing materials with equal to or greater than 50 parts per million (ppm) as PCB Bulk Product Waste. Steel structural components to remain such as steel lintels were to be cleaned to meet required visual standards and wipe sampling criteria for high occupancy use. Materials containing PCBs equal to or greater than (\geq) 50 ppm include exterior window caulking (1956 section), and the metal surfaces were to be cleaned of PCB caulking and remain include structural steel lintels.

The overall project objective is to remove PCB materials to facilitate demolition in selected sections of the school in accordance with the proposed renovation/selective demolition plans as a high occupancy use upon completing the PCB SIP work.

In accordance with State of Connecticut statutes we understand that caulking or other building materials containing PCBs < 50 ppm but equal to or greater than 1 ppm PCB are regulated and require

remediation. We also understand that substrate testing is required under 40 CFR § 761.3 to meet the definition of an excluded PCB product and samples were collected to confirm excluded PCB products.

1.3 Remedial Action Approach

The remedial action approach consisted of the removal and off-site disposal of the exterior window, overhead door component associated with caulking compounds, and waterproofing mastic/ as PCB Bulk Product Waste.

1.4 Regulatory Framework

The completed remediation activity was proposed as a voluntary action to address the presence of PCB-containing caulking compounds associated with select with selected areas associated with phase-I renovation project.

1.4.1 United States Environmental Protection Agency

The EPA was the lead agency contact for the review of information regarding the investigation and remediation of PCBs at the Site. Of interest to the EPA was that the remediation was conducted in a manner consistent with the Toxic Substances Control Act (TSCA) and more specifically, the provisions of 40 CFR 761 – Polychlorinated Biphenyls Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions. Pertinent documents issued by the EPA are provided below along with key contacts associated with each.

PCB Cleanup and Disposal Approval pursuant to 40 CFR 761.61 (a) and 761.79 (h) was provided on May 18, 2013 in response to the SIP originally submitted on October 2, 2012 and revised on March 14, 2013.

- A copy of the *PCB Cleanup and Disposal Approval* is provided in *Appendix B*.
- The key contact for the above was:
Ms. Kimberly Tisa
PCB Coordinator
U.S. Environmental Protection Agency
Region 1
5 Post Office Square, Suite 100
Mail Code: OSRR07-2
Boston, MA 02109-3912
Telephone (617) 918-1527
Facsimile (617) 918-0527

EPA guidelines were used for the investigation and remediation of PCBs from the Site.

2 Background

This section provides a description of the Site and includes information on the Building Material Characterization Activities at the Site.

2.1 Building Description

The Orville H. Platt High School was constructed in 1956 and was completed in 1958; with an addition being completed in 1968. The majority of the school building is a two-story structure and there is limited basement space for utilities. The windows associated with the 1956 section of the building include 435 windows.

The building consists of approximately 234,523 square feet of classrooms, cafeteria, multi-purpose room, an interior in-ground pool, and technology learning centers. The exterior of the building is concrete block and brick while interior walls are constructed of concrete block, wall board and brick. Window systems are composed of metal. Figures HM-01 and HM-02 show the areas of the existing school.

The Orville H. Platt High School had the original roof(s) 1956 section, and 1968 section replaced in 1999. All caulks associated with roofs are considered Excluded PCB Products since the roof was replaced in 1999 and the use of PCBs in building materials was banned in 1979.

2.2 Building Material Characterization Activities

Source material sampling conducted on January 6, and January 23, 2013. Additional sampling was performed on March 7 and April 6, 2012 due to elevated reporting limit concentrations.

Additional information regarding caulking and adjacent surface characterization sampling can be found in the Self Implementing On-site Clean-up and Disposal Plan attached as *Appendix A*.

3 Remediation Activities

This section contains a description of the remediation activities completed at the Site including: (1) Pre-remediation Activities, (2) Remediation Activities, and (3) Post Remediation Verification Sampling.

3.1 Pre-Remediation Activities

The PCB remediation contractor, Yankee Environmental Services, built containments around exterior windows at the Chorus/Band Room (PCB's >50PPM) and at the exterior backside by the pool area (overhead openings which contained ACM & PCB's <50PP) to remove PCB containing caulk and PCB contaminated frames/metal components. All non-porous steel lintels were removed and disposed as PCB's contaminated waste. For the material that contain <50PPM, in selected area outside of the Chorus/Band Room (waterproofing mastic), the contractor installed polyethylene sheeting on the floor,

at base of the foundation, extended approximately 15 to 20 feet out to prevent the potential for cross-contamination during the PCB remediation. A three-stage remote worker decontamination unit was constructed net to the work area.

3.1.1 Approval and Approval Conditions

Prior to initiation of the remediation activities at the Site, it was necessary to obtain the approval of the regulatory agency maintaining jurisdiction over the work and as well as meet certain approval conditions. The agency maintaining jurisdiction over the work was the EPA.

3.1.1.1 United States Environmental Protection Agency

The EPA required the submission of a SIP to review for consistency with the provisions of 40 CFR 761.61 – Polychlorinated Biphenyls Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions. The SIP was initially prepared and submitted to the EPA on October 2, 2012 and revised on March 14, 2013. The notification included a presentation of the Site characterization data, statement of the remedial action objectives, a description of the Site preparations and controls, a description of the Site remedial action procedures, and a description of the Site verification plan for remedial action procedures.

Per Condition 9 of the *PCB Cleanup and Disposal Approval*, the Town of Meriden was required to provide written notification of its acceptance of the conditions of the approval to the EPA. A copy of the acceptance was submitted to the EPA as required and is provided in *Appendix C, Item 1*.

Per Condition 10a of the *PCB Cleanup and Disposal Approval*, the Remediation Contractor was required to provide written notification of its understanding and acceptance of the Notification, and that the Remediation Contractor agreed to abide by the conditions of the approval. A copy of the acceptance was submitted to the EPA as required is provided in *Appendix C, Item 3*.

Per Condition 10b of the *PCB Cleanup and Disposal Approval*, the Analytical Laboratory was required to provide written notification of its understanding and acceptance of the extraction and analytical methods and quality assurance requirements specified in the Notification and conditions of the approval. A copy of the laboratory's acceptance was submitted to the EPA as required and is provided in *Appendix C, Item 2*

Per Condition 10c of the *PCB Cleanup and Disposal Approval*, the Remediation Contractor was required to submit a work plan detailing the procedures that will be employed for removal of PCB-containing and PCB-contaminated waste and for containment and air monitoring during removal activities. Additionally, this work plan was to include information on waste storage, handling, and disposal for each waste stream type and for equipment decontamination. A copy of the work plan was submitted to the EPA as required and is provided in *Appendix C, Item 4*.

3.2 Remediation Activities

The remediation activities associated with this project are presented in two categories: (1) PCB Bulk Product Waste and (2) PCB Remediation Waste.

3.2.1 PCB-Containing Product Removal

PCB bulk product waste including PCB caulking compound and PCB remediation waste associated with caulking compounds were handled and removed from specified locations for proper disposal. Materials were removed in a manner that did not break down the materials into fine dust or powder to the extent feasible. Both mechanical equipment and hand tools were used to remove materials from adjacent substrates. The mechanical removal tools were fitted with HEPA dust collection systems. Dry or brittle caulking compound and associated dust and/or debris were removed utilizing HEPA vacuums. Materials removed were placed in lined containers marked according to 40 CFR 761.40 formatted according to 40 CFR 761.45. The materials were stored for disposal in accordance with 40 CFR 761.65.

The sequence of removal followed general requirements:

1. PCB caulking associated with the window frames was removed and properly containerized for disposal as PCB bulk product waste (≥ 50 ppm PCBs).
2. Surfaces from which PCB caulking had been removed were cleaned with a solvent-based cleaner and wire brush to remove visible caulking.
3. All materials were properly containerized for disposal as PCB Bulk Product waste (<50 ppm PCBs) not excluded PCB Products. Upon completion all surfaces were then HEPA vacuumed.

The Uniform Hazardous Waste Manifest is provided in *Appendix E*.

3.2.2 Adjacent Building Material Removal

Building materials adjacent to PCB-containing caulk were removed in a manner that minimized the breakdown of the materials into fine dust. Equipment used included hand tools and reciprocating hammers.

The reciprocating tools were fitted with HEPA dust collection systems. Dust and/or debris were removed utilizing HEPA vacuums. Materials removed were placed in lined containers marked according to 40 CFR 761.40 with markings formatted according to 40 CFR 761.45. The materials were stored for disposal in accordance with 40 CFR 761.65. Post-remediation verification sampling was conducted in accordance with the approach from Sub-part O for porous materials. The Uniform Hazardous Waste Manifest is provided in *Appendix E*.

3.3 Post-Remediation Verification Sampling

3.3.1 Bulk Verification Sampling

Verification sampling of porous masonry components at windows by in the Chorus/Band Room area were performed in accordance with 40 CFR 761.61 Sub-part O. Samples were collected approximately every 10 feet linear along the masonry bricks. Results were compared to the high occupancy standard for porous surfaces of ≤ 1 ppm using the extraction method 3540C and analysis method SW846 8082.

The results of the verification sampling are as follows:

Table 1 – Bulk Verification Sample Results

Sample ID	Sample Location	Material Description	Result (mg/kg)
Room 407 Band Room and Band Room Storage			
1112UA-01A	Window 1-Right side	Brick	ND <0.32
1112UA-01B	Window 1-Right side sill	Brick	ND <0.33
1112UA-01C	Window 1-Sill	Brick	ND <0.33
1112UA-01D	Window 1-Sill	Brick	ND <0.32
1112UA-01E	Window 1-Left sill	Brick	ND <0.33
1112UA-01F	Window 1-Left side	Brick	ND <0.33
1112UA-02A	Window 1-Right side	Brick	ND <0.33
1112UA-02B	Window 2-Right side sill	Brick	ND <0.33
1112UA-02C	Window 2-sill	Brick	ND <0.33
1112UA-02D	Window 2-sill	Brick	ND <0.33
1112UA-02E	Window sill	Brick	ND <0.32
1112UA-02F	Window sill	Brick	ND <0.33

*All lintels were removed in its entirety. No additional sampling was required.

This report was prepared by Environmental Technician Ulkens Auguste.

Dear Ms. Woodward:

We are submitting this work plan in accordance with the notification requirements for a Self-Implementing On-Site Cleanup and Disposal plan for regulated PCB containing materials at the Orville H. Platt High School in Meriden, CT. The plan has been prepared and submitted in accordance with requirements of 40 CFR Part § 761.61(a)(3).

Thank you for your attention to this matter and if you have any questions with regard to the plan please contact the undersigned, Carlos Texidor, at (860) 646-2469 ext. 5570 or email: ctexidor@fando.com.

Sincerely,

Carlos Texidor

1 Introduction

This plan has been prepared by Fuss & O'Neill EnviroScience, LLC (EnviroScience) on behalf of Mr. Michael Grove, Assistant Superintendent for the Meriden Public Schools located at 22 Liberty Street, Meriden, Connecticut 06450; Email: Michael.grove@meridenk12.ct.us, Telephone: (203) 630-4174. The plan has been prepared to comply with the U.S. Environmental Protection Agency (USEPA) requirements for notification of a Self-Implementing On-Site Cleanup and Disposal Plan (SIDP) in accordance with 40 CFR Part § 761.61(a)(3). This work will be done in support of the demolition of approximately 80 percent of the school, and new construction. There will also be renovation(s) of the pool, auditorium, and gymnasium.

Exterior window caulking (1956), Interior slate window sill caulking compounds (1968) and shellac/varnish associated with the exercise (small) gym wood floor (1968) have been determined to contain polychlorinated biphenyls (PCBs) above regulated concentrations at the Orville H. Platt High School located at 220 Coe Avenue in Meriden, Connecticut. The building is scheduled to undergo a significant renovation including selective demolition in the 1956, and 1968 Sections and will be completed in the summer of 2016. The window(s) including the window sills (1968) and gym floor locations where regulated PCB materials are present will require removal as part of the renovation and selective demolition of the existing building. A Site Location Map identifying the building is included in Figure 1-1.

1.1 Background

The Orville H. Platt High School was constructed in 1956 and was completed in 1958; with an addition being completed in 1968. The majority of the school building is a two-story structure and there is limited basement space for utilities. The windows associated with the 1956 section of the building include 435 windows.

The building consists of approximately 234,523 square feet of classrooms, cafeteria, multi-purpose room, an interior in-ground pool, and technology learning centers. The exterior of the building is concrete block and brick while interior walls are constructed of concrete block, wall board and brick. Window systems are composed of metal. Figures HM-01 and HM-02 show the areas of the existing school.

The Orville H. Platt High School had the original roof(s) 1956 section, and 1968 section replaced in 1999. All caulks associated with roofs are considered Excluded PCB Products since the roof was replaced in 1999 and the use of PCBs in building materials was banned in 1979.

1.2 Project Objectives

This SIDP is for the removal of polychlorinated biphenyl (PCB) containing materials with equal to or greater than 50 parts per million (ppm) as PCB Bulk Product Waste. Steel structural components to remain such as steel lintels shall be cleaned to meet required visual standards and wipe sampling criteria for high occupancy use. Materials containing PCBs equal to or greater than (\geq) 50 ppm include exterior window caulking (1956 section) and shellac/varnish (associated with the exercise (small) gym floor (1968 section), and the Metal surfaces to be cleaned of PCB caulking and remain include structural steel lintels.

The objective of the project is to remove PCB exterior window caulking (1956 section), shellac/varnish associated with the exercise gym wood floor (1968 section), and the interior slate window sill caulking compounds, including the slate sills (1968) as PCB Bulk Product Waste containing PCBs \geq 50 ppm. Non-porous surfaces shall be cleaned to standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$. The overall project objective is to remove PCB materials to facilitate demolition in selected sections of the school in accordance with the proposed renovation/selective demolition plans as a high occupancy use upon completing the PCB SIDP work.

In accordance with State of Connecticut statutes we understand that caulking or other building materials containing PCBs < 50 ppm but equal to or greater than 1 ppm PCB are regulated and require remediation. We also understand that substrate testing is required under 40 CFR § 761.3 to meet the definition of an excluded PCB product and samples were collected to confirm excluded PCB products.

1.3 Plan Organization

This SIDP has been organized into the following sections:

Section 2: Site Characterization

The site characterization section provides a summary of the sampling performed to delineate the nature and extent of PCB as required in accordance with 40 CFR Part § 761.61 (a)(3) (A-C). The section includes the nature of the contamination including kinds of materials; a summary of the procedures used to sample contaminated and adjacent surfaces; and the location and extent of the identified contaminated areas.

Section 3: Remediation Plan

The remediation plan includes a discussion of how the remedial objectives identified in Section 1.2 shall be met and the remediation approach, cleanup levels to be met and the verification sampling approach to be utilized. This section includes diagrams depicting the areas of proposed remediation work and location for post-remediation verification sampling. The remediation plan is submitted in accordance with 40 CFR Part § 761.61 (a)(3)(D).

Section 4: Schedule and Certification

The proposed schedule for implementation and reporting schedule is provided. This section includes the written certification signed by the Owner of the property and other responsible parties responsible for the remediation, cleanup and disposal in accordance with 40 CFR Part § 761.61 (a)(3)(E).

2 Site Characterization

This section provides a summary of the sampling performed to delineate the nature and extent of PCB as required in accordance with 40 CFR Part § 761.61 (a)(3) (A-C). The section includes the nature of the contamination including kinds of materials; a summary of the procedures used to sample contaminated and adjacent surfaces; and the location and extent of the identified contaminated areas.

The following sections describe the selection of sample locations, sample collection methods, and the results of the characterization data. The initial site characterization of source materials such as caulking materials (Phase 1), testing of adjacent surfaces to facilitate development of this SIDP plan (Phase 2), and the development of the SIDP plan was performed by Fuss & O'Neill EnviroScience, LLC (EnviroScience) of Manchester, CT. Figures depicting the locations of all samples collected by EnviroScience are included in Drawings PCB-01, PCB-02, PCB-03, and PCB-04 respectively.

2.1 Sample Collection and Analysis

PHASE 1 – BULK PRODUCT MATERIAL SAMPLING

Testing of bulk product materials was conducted by EnviroScience representatives Eduardo Miguel Marques. Sampling was performed on January 6 and January 23, 2012. Additional sampling was performed on March 7 and April 6, 2012 due to elevated reporting limit concentrations. Source material sampling locations are identified. Please refer to PCB-01.

The following source material samples were collected:

- Skylight glazing compound – 2 samples
- Tar associated with rolled sheet roof (1956) – 2 samples
- Rolled sheet roof – top layer (1956) – 1 sample
- Roof Caulk associated with brick/metal flashing (semi-circle, 1956) – 1 sample
- Roof Pitch box flashing (1956) – 1 sample
- Roof drain flashing (1956) – 2 samples
- Top layer roof (1956) – 1 sample
- Bottom layer roof (1956) – 1 sample
- Caulk associated with roof vent (1956) – 1 sample
- Caulk associated with roof exhaust vent (1956) 1 sample
- Top layer roof (1968) – 1 sample
- Bottom layer roof (1968) – 1 sample
- Caulk associated with roof exhaust vent (1968) 1 sample
- Vent roof flashing (1968) – 1 sample
- Caulk associated with roof exhaust vent (1968) 2 samples
- Vent roof flashing (1956) 1 sample
- Caulk associated with roof exhaust vent (1956) 1 sample
- Roof-Rolled sheet flashing (1956) – 1 sample
- Roof-Rolled sheet flashing (1968) – 1 sample
- Roof-Flashing/Tar – parapet (1956) – 2 samples
- Roof-Flashing/Tar – parapet (1968) – 1 sample
- Roof parapet caulk (1956) – 1 sample
- Roof-Flashing/Tar perimeter (1956) – 1 samples
- Roof-Flashing/Tar perimeter (1968) – 1 samples
- Exterior window caulk (1956) – 1 sample
- Exterior window caulk at sash (1956) – 1 sample
- Exterior window glazing compound (1956) – 1 sample
- Exterior window caulk (1968) – 3 samples
- Exterior window glazing compound (1968) – 2 samples
- Exterior door caulk (1968) – 3 samples
- Exterior expansion joint caulk (1956/1968) – 3 samples
- Exterior door caulk (1956) – 3 samples
- Interior slate window sill caulk (1968) – 3 samples
- Interior window caulk (1956) – 3 sample
- Interior window caulk (1968) – 3 sample
- Black sink basin caulk (1956) – 3 samples
- Black sink basin caulk (1968) – 3 samples
- Blind flashing/Waterproofing (1968) – 3 samples
- Blind flashing/Waterproofing (1956) – 3 samples
- 1st Floor interior CMU expansion joint caulk (1956/1968) – 3 samples
- Wood shellac/varnish floor (gymnasium, 1968) – 3 samples
- Mastic associated with cork under wood floor (gymnasium, 1968) – 3 samples
- Black tar vapor barrier under cork (gymnasium, 1968) – 3 samples
- Wood shellac/varnish floor (gymnasium, 1956) – 3 samples
- Vapor barrier wood floor (gymnasium, 1956) – 3 samples
- Black tar behind CMU interior expansion joint caulk (1956/1968)

Bulk Sampling

Sampling involved removal of bulk product materials (source materials) such as caulking, roofing, varnishes, mastics and glazing compounds using hand tools to submit for PCB analysis. The tools utilized to collect samples were cleaned using hexane wash procedure between collecting each unique sample. Each sample was placed in containers, labeled, and delivered to the laboratory using chain of custody. Samples were analyzed at Con-Test Analytical Laboratory of East Longmeadow, MA. The analytical method for analysis included extraction method 3540C and analysis method SW846 8082.

The sample numbers, locations, material description, and analysis results are included in Table 2.1 (in Section 2.2.1).

PHASE 2 – ADJACENT SURFACE SAMPLING

On March 7, 2012 and April 6, 2012, Fuss & O'Neill EnviroScience (EnviroScience) representatives Eduardo Miguel Marques and Andrew Jackson performed supplemental testing of adjacent surfaces and soil at Oliver H. Platt High School in Meriden, Connecticut.

Initial testing results of source materials at Oliver H. Platt High School in Meriden, Connecticut determined the following material to contain PCBs at concentrations ≥ 50 PPM:

- Exterior window caulk – (1956)
- Shellac associated with gymnasium (small) wood floor (1968)
- Interior window sill caulking – (1968)

In addition, PCBs at concentrations > 1 PPM but < 50 PPM were identified in the following materials:

- Exterior window caulk at sash (1956)
- Exterior window glazing compound (1956)
- Exterior door caulk – adj. garage (1968)
- Exterior window caulk – Cafeteria wing (1968)
- Interior window caulk – (1956)
- Interior window caulk – (1968)
- Interior slate window sill caulk – (1968)
- Black sink basin caulk – (1956)
- Black sink basin caulk – (1968)
- Blind flashing/Waterproofing – (1956)
- Blind flashing/Waterproofing – (1968)
- Interior expansion joint compound caulk (1956/1968)
- Mastic associated with cork under exercise gym wood floor (1968)
- Black tar vapor barrier under exercise gym wood/cork floor (1968)
- Black vapor barrier under gymnasium wood floor (1956)
- Caulk associated with exhaust vent (1968)

This supplemental testing was required for the development of this plan for submission to the EPA prior to demolition/renovations.

Sampling was performed when students and faculty were not present. All samples collected were transported to Con-Test Analytical Laboratory of East Longmeadow, MA for analysis. The analytical method for analysis included extraction method 3540C and analysis method SW846 8082.

Twelve (12) adjacent surface samples (exterior brick veneer and interior block) were collected at depths of 0.5 inch and 1 inch into the substrate at locations analyzed to have concentrations of PCBs associated with exterior window caulk, interior window caulk, exterior door caulk, concrete, wood and interior CMU wall expansion joint caulk.

Forty-two (42) soil samples were collected from the exterior perimeter areas of window locations at the 1956 section of the building noted to have PCB concentrations associated with caulking. Soil samples were collected at depths of 0-4 inches and 4-8 inches.

PHASE 3 – “EXCLUDED PCBS PRODUCT”

Sampling was performed on April 6, June 6, 2012, and January 23, 2013. Samples were collected Fuss & O'Neill EnviroScience, LLC Senior Environmental Technician Eduardo Miguel Marques. All samples collected were transmitted to Contest Analytical Laboratory in East Longmeadow, MA. Building caulks and glazing putty were determined to be Excluded PCB Products if the insitu total PCB concentration was <50 mg/kg and if it could be determined that the caulk/glazing/vapor barrier material was original and the total PCB concentration had not been modified by subsequent activities. All of the below mentioned materials were determined to be original to building construction and no evidence that subsequent renovations had modified total PCB concentrations. The analytical method for analysis included extraction method 3540C and analysis method SW846 8082.

- Three (3) bulk sample of the Pool-Ceiling-Precast-T's (joint expansion caulk) (1968)
- Three (3) bulk sample of the Vapor barrier under wood floor (vapor barrier) (1956)

Sampling was performed on April 6, June 6, 2012, and January 23, 2013. Samples were collected Fuss & O'Neill EnviroScience, LLC Senior Environmental Technician Eduardo Miguel Marques. All samples collected were transmitted to Contest Analytical Laboratory in East Longmeadow, MA. Building caulks and glazing putty were determined to be Excluded PCB Products if the insitu total PCB concentration was <50 mg/kg and if it could be determined that the caulk/glazing/material was original and the total PCB concentration had not been modified by subsequent activities. All of the below mentioned materials were determined to be original to building construction and no evidence that subsequent renovations had modified total PCB concentrations. The analytical method for analysis included extraction method 3540C and analysis method SW846 8082. All materials listed below are from sections of the school that will be demolished.

- One (1) bulk sample of the exterior window caulk at sash (1956)
- One (1) bulk sample of the exterior window glazing compound (1956)
- Three (3) bulk sample of the exterior door caulk – adj. garage (1968)
- Three (3) bulk sample of the exterior window caulk – Cafeteria wing (1968)
- One (1) bulk sample of the interior window caulk – (1956)
- Three (3) bulk samples sample of the interior slate window sill caulk – (1968)
- Three (3) bulk samples of the Black sink basin caulk – (1956)
- Three (3) bulk samples of the Black sink basin caulk – (1968)

- Three (3) bulk samples of the Blind flashing/Waterproofing – (1956)
- Three (3) bulk sample of the Blind flashing/Waterproofing – (1968)
- Three (3) bulk sample of the interior expansion joint compound caulk – (1956/1968)
- Three (3) bulk samples of the mastic associated with cork under gymnasium wood floor (1968)
- Three (3) bulk samples of the black tar vapor barrier under gymnasium wood/cork floor (1968)

Bulk Sampling – Porous Surfaces

EnviroScience conducted sampling of masonry in accordance with EPA “Standard Operating Procedures for Sampling Porous Surfaces for Polychlorinated Biphenyls” dated May 5, 2011. Sampling involved first complete removal of bulk product materials (source materials) at sampling locations using hand tools. The intent was to ensure complete removal of source material prior to sampling adjacent surfaces. Once removal of all visible source material was performed the porous surfaces were cleaned with hexane and rinsed with distilled water. The adjacent porous surfaces tested were exterior brick veneer and interior block. Porous surfaces were sampled using a mechanical hammer drill to obtain samples at depths of 0 to 0.5 inch depth and 0.5 to 1 inch depths where possible based on material matrix. The bulk materials were analyzed for PCB content from each cross section. Tools utilized to collect samples were cleaned using hexane wash series including soapy water, distilled clean water, and hexane between sampling. Each sample was placed in 4 ounce glass jars, labeled and delivered to laboratory using proper chain of custody.

The sample numbers, locations, material description, and analysis results are included in Table 2.2. Refer to PCB-04 for drawing identifying locations of collected samples.

Soil Sampling

Soil samples were collected where window systems were determined to contain PCBs at concentrations \geq 50 PPM (1956 section). Samples were collected at the perimeter of the building three to four feet from building perimeter. Soil samples were collected at depths of 0-4 inches and 4-8 inches. A total of forty-two (42) soil samples were collected of which only twenty-one (21) samples were analyzed (top layer of soil, 0-4 inches) to characterize soil for PCB concentrations. PCBs were not detected at depths of 0-4 inches in soil; therefore, the 4-8 inches of soil samples were not analyzed.

Samples collected at the above specified intervals were collected by trowel or hand auger, and transferred to glass containers, labeled and delivered to laboratory using proper chain of custody. Samples were preserved using ice during transport to laboratory. The tools utilized to collect samples were cleaned using hexane wash procedure between collecting each unique sample.

The sample numbers, locations, material description, and analysis results are included in Table 2.3. Refer to Figure 2-2 for drawings identifying locations of collected samples.

2.2 Sample Analysis Results

The following tables summarize the specific sampling locations of collected samples and results of PCB analysis. The analytical method for analysis included extraction method 3540C (Soxhlet Extraction) and analysis method SW846 8082. The laboratory results and chain of custody are included in Appendices.

2.2.1 Source Material Sample Analysis Results

The analysis results of all collected caulking materials collected are summarized in Table 2.1. Note results in bold contain PCBs at ≥ 50 ppm or greater.

Table 2.1 – PCB Bulk Product Sample Analysis Results Summary

Sample Number	Sampled Location	Material Description	Result (mg/kg or ppm)
0123EMM-01P	Exterior windows (1956)	Gray Exterior window caulk	240 (Aroclor 1254) Reporting Limit, 19
0406EMM-07B	1968 - Gymnasium	Wood shellac floor	67 (Aroclor 1254) Reporting Limit, 9.1
0106EMM-01P	Roof (1956)	Skylight glazing compound	None Detected Reporting Limit, 2.0
0307EMM-23	Roof (1956)	Skylight glazing compound <i>Re-test due to elevated reporting limit noted on sample 0106EMM-01P</i>	None Detected Reporting Limit, 0.98
0106EMM-02P	Roof (1956)	Tar associated with rolled sheet roof	None Detected Reporting Limit, 13
0307EMM-25	Roof (1956)	Tar associated with rolled sheet roof <i>Re-test due to elevated reporting limit noted on sample 0106EMM-02P</i>	None Detected Reporting Limit, 0.96
0106EMM-03P	Roof (1956)	Rolled sheet roof (top layer)	None Detected Reporting Limit, 0.45
0106EMM-04P	Roof (semi-circle) (1956)	Caulk associated with brick/metal flashing	None Detected Reporting Limit, 0.99
0106EMM-05P	Roof (1956)	Pitch box flashing	None Detected Reporting Limit, 0.33
0106EMM-06P	Roof (1956)	Roof drain flashing	None Detected Reporting Limit, 1.0
0307EMM-24	Roof (1956)	Roof drain flashing <i>Re-test due to elevated reporting limit noted on sample 0106EMM-06P</i>	None Detected Reporting Limit, 0.97
0106EMM-07P	Roof (1968)	Bottom layer roof	None Detected Reporting Limit, 0.40
0106EMM-08P	Roof (1968)	Top layer roof	None Detected Reporting Limit, 0.50
0106EMM-09P	Roof (1968)	Bottom layer roof	None Detected Reporting Limit, 0.67
0106EMM-10P	Roof (1956)	Top layer roof	None Detected Reporting Limit, 0.50
0106EMM-11P	Roof (1968)	Caulk associated with exhaust vent	1.4 (Aroclor 1254) Reporting Limit, 1.0

Sample Number	Sampled Location	Material Description	Result (mg/kg or ppm)
0106EMM-12P	Roof-parapet (1956)	Caulk associated with vent	None Detected Reporting Limit, 0.97
0106EMM-13P	Roof (1956)	Caulk associated with exhaust vent	None Detected Reporting Limit, 0.99
0106EMM-14P	Roof (1968)	Vent flashing	None Detected Reporting Limit, 1.3
0307EMM-27	Roof (1968)	Caulk associated with exhaust vent <i>Re-test due to elevated reporting limit noted on sample 0106EMM-14P</i>	None Detected Reporting Limit, 0.50
0106EMM-15P	Roof (1956)	Vent flashing	None Detected Reporting Limit, 1.5
0307EMM-26	Roof (1956)	Caulk associated with exhaust vent <i>Re-test due to elevated reporting limit noted on sample 0106EMM-15P</i>	0.61 Aroclor 1248 0.95 Aroclor 1254 Total PCBs, 1.56 Reporting Limit, 0.50
0106EMM-16P	Roof (1956)	Rolled sheet flashing (top layer)	None Detected Reporting Limit, 0.48
0106EMM-17P	Roof (1956)	Rolled sheet flashing (top layer)	None Detected Reporting Limit, 0.50
0106EMM-18P	Roof-parapet (under metal) (1968)	Flashing	None Detected Reporting Limit, 0.71
0106EMM-19P	Roof-parapet (under metal) (1956)	Flashing	None Detected Reporting Limit, 18
0406EMM-13	Roof-parapet (under metal) (1956)	Flashing <i>Re-test due to elevated reporting limit noted on sample 0106EMM-19P</i>	None Detected Reporting Limit, 0.48
0106EMM-20P	Roof-parapet (1956)	Caulk	None Detected Reporting Limit, 0.91
0106EMM-21P	Roof-perimeter (1968)	Flashing	None Detected Reporting Limit, 0.91
0106EMM-22P	Roof-perimeter (1956)	Flashing	None Detected Reporting Limit, 0.25
0123EMM-02P	Exterior windows (1956)	Exterior window caulk at sash	4.2 (Aroclor 1254) Reporting Limit, 0.84
0123EMM-03P	Exterior windows (1956)	Exterior window glazing compound	4.7 (Aroclor 1254) Reporting Limit, 0.87
0123EMM-04P	Exterior windows -rear (1968)	Exterior window caulk	None Detected Reporting Limit, 0.84
0123EMM-05P	Exterior windows - rear (1968)	Exterior window glazing compound	None Detected Reporting Limit, 0.87
0123EMM-06P	Exterior doors (1968)	Exterior door caulk	None Detected Reporting Limit, 0.89

Sample Number	Sampled Location	Material Description	Result (mg/kg or ppm)
0123EMM-07P	Exterior expansion joints (1956/1968)	Exterior expansion joint caulk	None Detected Reporting Limit, 0.99
0123EMM-08P	Exterior doors Adj. garage doors (1968)	Exterior door caulk	1.4 (Aroclor 1254) Reporting Limit, 0.94
0123EMM-09P	Exterior doors (1956)	Exterior door caulk	None Detected Reporting Limit, 0.98
0123EMM-10P	Exterior doors (1956)	Exterior door caulk	None Detected Reporting Limit, 0.97
0123EMM-11P	Exterior windows café wing (1968)	Exterior window caulk	4.2 (Aroclor 1254) Reporting Limit, 0.88

Laboratory analysis results and chain of custody are included in *Appendix A* for source materials.

2.2.2 Adjacent Porous Materials Sample Analysis Results

The analysis results of source and substrate materials are summarized in Table 2.2. The results from the sampling identify consistent results for PCBs in multiple samples, adjacent substrates do not contain PCBs, and construction history identifies these materials as original prior to 1984 and therefore indicate these materials do meet the definition of an "Excluded PCB Product as defined at 40 CFR Part §761.3. These materials will be handled under the Connecticut Department of Energy and Environmental Protection (CTDEEP) PCB's containing waste.

Table 2.2

Sample Number	Sampled Location	Material Description	Result (mg/kg)
0406EMM-01A	1956 Wing – exterior Associated with exterior window caulk (270 PPM)	Core sample of brick to a depth of ½ inch	None detected Reporting Limit, 0.091
0406EMM-01B	1956 Wing – exterior Associated with exterior window caulk (270 PPM)	Core sample of brick to a depth of 1 inch	None detected Reporting Limit, 0.091
0406EMM-02A	1968 wing – cafeteria – exterior Associated with exterior window caulk (4.2 PPM)	Core sample of brick to a depth of ½ inch	None detected Reporting Limit, 0.095
0406EMM-02B	1968 wing – cafeteria – exterior Associated with exterior window caulk (4.2 PPM)	Core sample of brick to a depth of 1 inch	None detected Reporting Limit, 0.10
0406EMM-03A	1968 wing – adjacent garage Associated with exterior door caulk (1.4 PPM)	Core sample of brick to a depth of ½ inch	None detected Reporting Limit, 0.091
0406EMM-03B	1968 wing – adjacent garage Associated with exterior door caulk (1.4 PPM)	Core sample of brick to a depth of 1 inch	None detected Reporting Limit, 0.095
0406EMM-04A	Corridor – expansion joint (Right) Associated with interior expansion joint caulk (21.7 PPM)	Core sample of block (CMU Wall) to a depth of ½ inch	3.7, 0.89 (Aroclor 1248/1254) Reporting Limit, 0.50
0406EMM-04B	Corridor – expansion joint (Right) Associated with interior expansion joint caulk (21.7 PPM)	Core sample of block (CMU Wall) to a depth of ½ inch	2.6, 0.70 (Aroclor 1248/1254) Reporting Limit, 0.45
0406EMM-05A	1968 wing – interior – room 83 Associated with interior window caulk (9.2 PPM)	Core sample of block (CMU Wall) to a depth of ½ inch	0.21, 0.15 (Aroclor 1248/1254) Reporting Limit, 0.095
0406EMM-05B	1968 wing – interior – room 83 Associated with interior window caulk (9.2 PPM)	Core sample of block(CMU-Wall) to a depth of 1 inch	0.10 (Aroclor 1254) Reporting Limit, 0.095

Sample Number	Sampled Location	Material Description	Result (mg/kg)
0406EMM-06A	1956 wing – interior – room 63 Associated with interior window caulk (31 PPM)	Core sample of block to a depth of ½ inch	0.67, 0.14 (Aroclor 1248/1254) Reporting Limit, 0.091
0406EMM-06B	1956 wing – interior – room 63 Associated with interior window caulk (31 PPM)	Core sample of block to a depth of 1 inch	None detected Reporting Limit, 0.091
0629EMM-12	Exercise Gym (1968)	Concrete floor to a depth of 1 inch gymnasium (1968)	None detected Reporting Limit, 0.95

Note sampling was limited to maximum depth of 1". Laboratory analysis results and chain of custody are included in *Appendix B* for Adjacent porous material bulk samples.

2.2.3 Adjacent Non-Porous Materials Sample Analysis Results

No samples were collected of non-porous materials such as steel lintels. Steel structural components to remain such as steel lintels shall be cleaned to meet required visual standards and wipe sampling criteria for high occupancy use.

2.2.4 Adjacent Soil Sample Analysis Results

The results indicate that PCBs were not detected in the soil at the perimeter of the building at depths of 0-4.

Table 2.3

Sample Number	Sampled Location	Sample Depth	Result (mg/kg)
0307EMM-01A	Area 1, perimeter	0-4"	None detected Reporting limit, 0.13

Laboratory analysis results and chain of custody are included in *Appendix C* for soil samples.

3 Remediation Plan

The work described in this SIDP shall meet the objectives identified in section 1.2 Project Objectives in accordance with 40 CFR Part §761. The remediation work shall be performed to ensure compliance with EPA Toxic Substance Control Act (TSCA) requirements and protect both public health and the environment. Materials classified as PCB Bulk Product Waste and Bulk PCB Remediation Waste shall be properly disposed in compliance with federal and state regulatory requirements. Refer to HM-05 and HM-06 for locations requiring PCB abatement.

The proposed abatement activities to be performed by the Remediation Contractor shall include the following:

1. Site preparation and controls to facilitate remediation of PCBs.
2. Health and Safety in accordance with Occupation Safety and Health Administration (OSHA) requirements.
3. Recordkeeping and distribution as required in accordance with 40 CFR part § 761.125 (c) (5).

PCB ABATEMENT REQUIRMENTS

PCB Bulk Product Waste Removal

- PCB-01 – Remove existing exterior and interior window caulking (asbestos-containing) at all masonry window openings for disposal as PCB Bulk Product Waste ≥ 50 ppm.
- PCB-02 – Remove existing shellac/varnish from exercise gym and associated PCB-containing mastic and black tar vapor barrier from the gymnasium floor (1968) for disposal as PCB Bulk Product Waste ≥ 50 ppm.
- PCB-03 – Remove existing interior window sill caulking, and slate window sills at all window openings for disposal as PCB Bulk Product Waste ≥ 50 ppm.

Bulk PCB Remediation Waste Removal

- PCB-04- Remove existing interior expansion joint caulking, black tar behind expansion joint, and Concrete Masonry Unit (CMU) – 1 Course (16" Inches) of CMU on each side of the expansion joint caulking in two locations of the corridor of the 1956/1968 sections of the building for disposal as PCB Remediation Waste < 50 ppm.
- PCB-05 – Removal and off-site disposal of non-porous metal window assemblies including glass, PCB containing glazing compounds, transite panels (asbestos-containing), insulation etc. from all locations identified as PCB Remediation Waste ≥ 50 ppm.
- PCB-06 – Removal and off-site disposal of roof vent caulking from all vent locations identified as PCB Remediation Waste ≥ 50 ppm.

PCB-07 – Non-porous surfaces (exterior steel beam/lintel, roof vents) shall be cleaned to standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$.

Remediation activities to be performed shall include the following:

1. Monitoring remediation activities as Owner's representative shall be performed by Fuss & O'Neill EnviroScience, LLC.
2. Collection of verification samples in accordance with Sup-parts P and O in accordance with 40 CFR Part § 761 for PCB.
3. Site restoration shall be performed by Owner's general trades' contractor under separate contract following PCB remediation.

Prior to abatement and remediation activities, site preparation and controls shall be established. PCB Bulk Product Waste and Bulk PCB Remediation Waste will be removed and transported off-site for disposal at a permitted hazardous waste landfill which is an EPA, TSCA approved facility for PCB waste ≥ 50 ppm. Materials containing < 50 ppm that have not been classified as material containing ≥ 50 ppm will be transported to a non-hazardous solid waste disposal facility. PCB Bulk Product Waste shall be removed and properly disposed in accordance with 40 CFR Part § 761.62. Bulk PCB Remediation Waste shall be removed in accordance with Self-Implementing On-Site Cleanup and Disposal requirements in accordance with 40 CFR Part § 761.61.

3.1 Site Preparation and Controls

The work shall be performed in accordance with the attached SIDP technical specification section included in *Appendix D*. Prior to initiating PCB Removal the following site controls will be implemented.

- Remediation Contractor shall prepare a site specific work plan as detailed in specification section attached.
- Remediation Contractor shall prepare a Health & Safety Plan (HASP) developed specific to the site and work activities to be performed. All workers shall follow applicable federal and state regulation with regard to work activities, including but not limited to OSHA regulation including personal protection and respiratory protection requirements.
- Prior to any soil removal work, the boundaries of the excavation area shall be marked, properly secured, and a permit number obtained from "Call Before You Dig" shall be obtained. **(if applicable)**
- The project site shall be enclosed by a temporary construction fence. During all remediation activities, Remediation Contractor shall maintain control of all entrances and exits to the project site to ensure only authorized personnel enter the work areas and are afforded proper personal protective equipment and as required respiratory protection. All approaches to work areas shall be demarcated with appropriately worded warning signs.
- Work zones shall be established in accordance with technical specification to include abatement zone, decontamination zone and support zone.

- Ground protection to prevent debris from escaping the abatement zone and to protect areas outside of abatement zone from PCB contamination shall be utilized. Protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during cutting and demolition of structures. The membrane shall be covered with a single layer of 6-mil polyethylene sheeting securely fastened to foundation. Refer to technical specification section for requirements.
- Isolation barriers shall be installed on interior side of window system to isolate these systems to the building exterior where work shall be performed. Protection shall include two layers of 6-mil polyethylene sheeting securely affixed to the inside finish surfaces of walls to isolate window or door systems to the building exterior. Refer to technical specification section for requirements.
- Isolation barriers shall be installed on exterior side of window system to contain these systems where work shall be performed to minimize dispersal of dust and debris. Protection shall include two layers of 6-mil polyethylene sheeting securely affixed to the exterior side finish surfaces to contain window or door systems. To minimize dust and debris contractor shall utilize negative pressure containment with use of negative air filtration units with HEPA filtration. Refer to technical specification section for requirements.
- All other openings to the building interior such as unit ventilation, ducts, and grilles shall be securely sealed with a single layer of 6-mil polyethylene sheeting from the building exterior. Refer to technical specification section for requirements.
- Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB Bulk Product Waste removal and Bulk PCB Remediation Waste removal. All debris generated during operations including but not limited to visible caulking, dust and debris shall be HEPA vacuumed continuously throughout the work shift and at the end of a work shift to avoid accumulation. Any tears or rips that occur in protections shall be repaired or removed and replaced with new protections.
- It is anticipated that to facilitate the work movable staging or lifts will be utilized to access window systems. Wind screens consisting of 6-mil polyethylene sheeting shall be applied to staging or lift to prevent dispersal of dust and debris beyond the abatement zone. Platforms shall also be protected as appropriate to facilitate cleaning of dust and debris but not introduce trip or slip hazards.
- All equipment utilized to perform cutting, or demolition of adjacent materials shall be equipped with appropriate dust collection systems.
- All surfaces adjacent to materials removed shall be properly decontaminated upon completing the removal of PCB Bulk Product Waste and Bulk PCB Remediation Wastes. The work to cut and remove Bulk PCB Remediation Waste will result in dust on surfaces to remain and this dust may contain PCBs. All visible dust shall be removed using HEPA vacuums and wet cleaning methods with solvent or other acceptable products.

- Appropriate PCB waste containers shall be placed adjacent to abatement zones. Containers shall be lined covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part § 761.40 and § 761.45.

3.2 Removal Procedures

The following removal procedures shall be utilized to conduct PCB Bulk Product Waste and Bulk PCB Remediation Waste removal.

3.2.1 PCB Bulk Product Waste Materials

PCB Bulk Product Waste Materials including exterior/interior window caulking and PCB Remediation Waste including non-porous metal window assemblies including glass, PCB containing glazing compounds, and shellac/varnish and associated mastic and black tar vapor barrier from the gymnasium floor (1968) shall be handled and removed from specified locations for proper disposal. Materials shall be removed in a manner which does not breakdown the materials into fine dust or powder to the extent feasible. Equipment and tools to be utilized shall include hand tools and mechanical equipment such as demolition hammers to remove materials from adjacent substrates. Mechanical removal equipment shall as appropriate be fitted with dust collection systems. Any dry or brittle caulking or glazing compound materials or other PCB Bulk Product waste shall be removed with additional engineering controls such as use of a HEPA vacuum to remove accumulated dust or debris during removal. Once removed, materials shall be placed in lined containers or into appropriate temporary containers such as 6-mil polyethylene disposal bags for controlled transport to PCB waste containers at the end of each work shift. PCB Bulk Product Waste shall be stored for disposal in accordance with 40 CFR §761.65 and marked in accordance with 40 CFR Part § 761.40 and § 761.45. Sequence of removal shall follow the following general requirements:

1. PCB window caulking (1956) (including materials associated with those windows that were < 50 PPM) shall be removed from all windows at masonry openings and properly containerized for disposal as PCB Bulk Product Waste \geq 50 ppm. Surfaces from which PCB caulking has been removed shall be cleaned with solvent based cleaner and wire brush to remove all visible caulking prior to proceeding with removal of PCB Remediation Waste.
2. PCB shellac/varnish (1968) (including mastic and black tar vapor barrier that were < 50 PPM) shall be removed and properly containerized for disposal as PCB Bulk Product Waste \geq 50 ppm.
3. PCB interior window sill caulking including slate window sills (1968) shall be removed from all window opening for disposal as PCB Bulk Product Waste \geq 50 ppm. Surfaces from which PCB caulking has been removed (metal) shall be cleaned with solvent based cleaner and wire brush to remove all visible caulking.

3.2.2 Bulk PCB Remediation Waste – Adjacent Building Materials

The use of minimal quantities of water to moisten the generated dust prior to collection shall be utilized. Under no circumstances shall the PCB remediation waste show evidence of free liquid water, pooling, or

ponding within the waste stream. Any liquid used to wet the dust and debris to control fugitive emissions shall be collected and decontaminated in accordance with 40 CFR § 761.79 (b) or disposed of as PCB Liquid Waste in accordance with 40 CFR Part § 761.60 (a). All rags and other cleaning materials used to clean shall also be properly disposed as PCB Remediation Waste. All PCB Remediation Waste shall be disposed of in accordance with 40 CFR Part § 761.61(a)(5)(i)(B)(2)(iii). All waste containers shall comply with 40 CFR § 761.65 and shall be appropriately labeled in accordance with 40 CFR Part § 761.40 and § 761.45. Sequence of removal shall follow the following general requirements:

1. Steel lintels to remain shall be stripped of all paint and surface ground smooth. Non-porous surfaces (exterior steel beam/lintel) shall be cleaned to standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$.
2. Steel lintels to be removed shall be stripped of all paint and surfaces ground smooth. Non-porous surfaces (exterior steel beam/lintel) shall be cleaned to standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$, and recycled.
3. Once materials have been removed and surfaces cleaned EnviroScience shall be notified. Post testing verification sampling shall be performed once visually inspected to verify removal and cleaning, as per Subpart P.

3.3 Verification Sampling Plan

Following the completion of the Bulk PCB Remediation Waste shall implement the following verification sampling plan in accordance with 40 CFR Part § 761.61 (6) and to the extent applicable Sub-part O and P.

Upon completion of work in each area, a visual inspection of all remediated surfaces for visible evidence of dust and debris shall be performed. Surfaces shall also be inspected for visible PCB source materials that may not have been removed. The visual inspection shall provide in a preliminary way, verification that remediation work has been completed in accordance with this SIPD. Visual inspection shall ensure no visible dust or debris is present on adjacent surfaces where caulking was removed and adjacent surface cutting is completed. In addition to the remediation surfaces the surfaces of protective coverings and isolation barriers shall be inspected to ensure they are cleaned of dust and debris. No sampling shall be performed until the visual inspection is complete and the clearance criteria satisfied in each work area. The project shall be phased in accordance with proposed construction schedule.

3.3.1 Porous Brick (Verification Sampling)

Brick surfaces shall be evaluated to verify that removal of Bulk PCB Remediation Waste has resulted in surfaces with ≤ 1 ppm for unrestricted use based on high occupancy use of the structure. EnviroScience shall follow the EPA "Standard Operating Procedures for Sampling Porous Surfaces for Polychlorinated Biphenyls (PCBs)" (dated May 11, 2011) as prepared by the Office of Environmental Measurement and Evaluation, EPA New England Region 1., to collect verification samples. The areas to be sampled shall be representative of the variety of conditions identified. Appropriate control samples shall also be collected.

The locations of samples shall be based on visual inspection results. Locations requiring sample verification will be performed on associated masonry openings associated with window systems and exercise gym floor. The surfaces to be verified are irregular shaped and the requirements for sample location and quantity as detailed in Sub-part O (alternative) shall be applied in a linear fashion in lieu of a

grid pattern. The surfaces involve linear surfaces of vertical/horizontal jambs on multiple masonry openings resulting from PCB caulking materials. Sampling shall be conducted in accordance with the following protocol:

Windows – One chip sample shall be collected from each jamb having a linear dimension of **10 feet** or less. Two chip samples shall be collected from each jamb having a linear length of not more than 20 linear feet.

The Building where work is required has vertical/horizontal joints associated with rough openings for windows at the following delineations per designated side elevations:

Southeast Elevation 1956 Section

- 66 windows (1st and 2nd floor) with 2 vertical joints each containing 20 linear feet of caulk per joint and 1 horizontal joint at sill containing 297 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 30 chip samples will be collected from the horizontal joint
(32 samples)

Total verification sampling for Southeast Elevation = 38 samples.

Southeast Elevation - Section B-B 1956 Section

- 21 windows (1st and 2nd floor) with 2 vertical joints each containing 20 linear feet of caulk per joint and 1 horizontal joint at sill containing 95 linear feet of caulk (left of center core)
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 10 chip samples will be collected from the horizontal joint
(12 samples)
- 14 windows (1st and 2nd floor) with 2 vertical joints each containing 20 linear feet of caulk per joint and 1 horizontal joint at sill containing 63 linear feet of caulk (right of center core)
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 9 chip samples will be collected from the horizontal joint
(11 samples)
- 3 windows (2nd floor) with 2 vertical joints each containing 12 linear feet per joint and 1 horizontal joint at sill containing 12 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(4 samples)

Total verification sampling for Southeast Elevation – Section B-B = 27 samples.

South Elevation 1956 Section

- 3 windows (2nd floor) with 2 vertical joints each containing 12 linear feet per joint and 1 horizontal joint at sill containing 12 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(4 samples)

Total verification sampling for South Elevation = 4 samples.

Northeast Elevation-South End 1956 Section

- 3 windows (1st and 2nd floor) with 2 vertical joints each containing 20 linear feet per joint and 1 horizontal joint at sill containing 12 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(4 samples)
- 51 windows (1st and 2nd floor, partial just 2nd floor) with 1 vertical joint containing 20 linear feet, 1 vertical joint containing 14 linear feet (1st floor), 1 vertical joint (2nd floor) containing 6 linear feet, 1 horizontal joint at sill containing 153 linear feet of caulk (1st floor), and 1 horizontal joint at sill containing 77 linear feet of caulk (2nd floor)
 - **Verification sampling** – 2 chip samples will be collected from the vertical joint containing 20 linear feet of caulk, 2 chip samples will be collected from the vertical joint containing 14 linear feet, 1 chip samples will be collected from the vertical joint containing 6 linear feet, 16 chip samples will be collected from the horizontal joint at 1st floor, and 8 chip samples will be collected from the horizontal joint at 2nd floor
(29 samples)

Total verification sampling for Northeast Elevation = 33 samples.

Southwest Elevation-South End Court yard-Guidance 1956 Section

- 22 windows (1st and 2nd floor) with 2 vertical joints each containing 20 linear feet of caulk per joint and 1 horizontal joint at sill containing 99 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 10 chip samples will be collected from the horizontal joint
(14 samples)

Total verification sampling for Southwest Elevation-South End Courtyard/Guidance = 14 samples.

Northwest Elevation-Section A-A 1956 Section

- 26 windows (1st floor) with 2 vertical joints each containing 10 linear feet of caulk per joint and 1 horizontal joint at sill containing 117 linear feet of caulk
 - **Verification sampling** – 1 chip samples will be collected from each vertical joint (2) and 12 chip samples will be collected from the horizontal joint
(14 samples)

Total verification sampling for Northwest Elevation – Section A-A = 14 samples.

Northeast Elevation-North End 1956 Section

- 36 windows with 6 vertical joints each containing 10 linear feet of caulk at each vertical joint and 3 horizontal joints at sill totaling 162 linear feet of caulk
 - **Verification sampling** – 1 chip samples will be collected from each vertical joint (6) and 17 chip samples will be collected from the horizontal joint
(23 samples)

Total verification sampling for Northeast Elevation – North End = 23 samples.

Northwest corner Elevation 1956 Section

- 14 windows with 4 vertical joints containing 8 linear feet of caulk at each vertical joint and 1 horizontal joint at sill containing 63 linear feet of caulk
 - **Verification sampling** – 1 chip samples will be collected from each vertical joint (4) and 7 chip samples will be collected from the two horizontal joints
(11 samples)

Total verification sampling for Northwest Elevation = 11 samples.

Southwest Elevation North End-Cafeteria 1956 Section

- 3 windows with 2 vertical joints each containing 14 linear feet of caulk at each vertical joint and 1 horizontal joints at sill containing 14 linear feet of caulk
 - **Verification sampling** – 3 chip samples will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(5 samples)

Total verification sampling for Southwest Elevation – North End/Cafeteria =5 samples.

South Elevation Cafeteria 1956 Section

- 4 windows with 2 vertical joints each containing 14 linear feet of caulk at each vertical joint and 1 horizontal joints at sill containing 18 linear feet of caulk
 - **Verification sampling** – 2 chip samples will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(6 samples)

Total verification sampling for South Elevation – Cafeteria = 6 samples.

West Elevation Boy's Locker Room 1956 Section

- 6 windows with 2 vertical joints each containing 5 linear feet of caulk at each vertical joint and 1 horizontal joint at lintel containing 12 linear feet of caulk
 - **Verification sampling** – 1 chip sample will be collected from each vertical joint (2) and 2 chip samples will be collected from the horizontal joint
(4 samples)

Total verification sampling for West Elevation – Boy's Locker Room = 4 samples.

Northwest Elevation – Roof 1956 Section

- 1 window with 2 vertical joints each containing 5 linear feet of caulk at each vertical joint and 1 horizontal joint at lintel containing 4 linear feet of caulk
 - **Verification sampling** – 1 chip sample will be collected from each vertical joint (2) and 1 chip sample will be collected from the horizontal joint
(3 samples)

Total verification sampling for Northwest Elevation – Roof = 3 samples.

Southwest Elevation-Classrooms 1968 Section

- 74 windows (1st and 2nd floor) 1 horizontal joint at window sill containing 224 linear feet of window sill caulk
 - **Verification sampling** – 23 wipe samples will be collected from each horizontal joint (1) of the metal windows
(23 samples)

**Total verification sampling for Southwest Elevation-Classrooms 1968 Section
= 23 samples.**

Court Yard- South Elevation 1968 Section

- 20 windows (1st and 2nd floor) 1 horizontal joint at window sill containing 64 linear feet of window sill caulk
 - **Verification sampling** – 7 wipe samples will be collected from each horizontal joint (1) of the adjacent metal windows
(7 samples)

Total verification sampling for Court Yard-South 1968 Section

= 7 samples.

Court Yard- West Elevation 1968 Section

- 28 windows (1st and 2nd floor) 1 horizontal joint at window sill containing 84 linear feet of window sill caulk
 - **Verification sampling** – 9 wipe samples will be collected from each horizontal joint (1) of the adjacent metal windows
(9 samples)

Total verification sampling for Court Yard-West 1968 Section

= 9 samples.

West Elevation 1968 Section

- 14 windows (1st floor) 1 horizontal joint at window sill containing 70 linear feet of window sill caulk
 - **Verification sampling** – 7 wipe samples will be collected from each horizontal joint (1) of the adjacent metal windows
(7 samples)

Total verification sampling for West Elevation 1968 Section

= 7 samples.

South Elevation-Cafeteria 1968 Section

- 1 windows (1st floor) 1 horizontal joint at window sill containing 5 linear feet of window sill caulk
 - **Verification sampling** – 1 wipe samples will be collected from each horizontal joint (1) of the adjacent metal windows
(1 samples)

Total verification sampling for South Elevation-Cafeteria 1968 Section

= 1 samples.

1968 Exercise Gymnasium (Small Gym) (Approximately 1,000 SF)

- Shellac/varnish wood floor (≥ 50 PPM) and black mastic and tar vapor barrier associated with wood floor (>1 PPM but less than 50 PPM) will be removed. Verification sampling will be performed in 10 representative samples of concrete sub floor will be collected in the 1968 auxiliary gymnasium.

Total verification sampling for 1968 Exercise Gymnasium (Small Gym) = 10 samples.

1956/1968 Interior expansion joint compound caulking (Approximately 40 LF)

- Interior expansion joint compound caulk (1956/1968)

Total verification sampling for 156/1968 Interior expansion joint compound caulking = 4 samples

A total of 356 samples for verification shall be collected along with 5% duplicate samples (18 samples), totaling 374 samples. The laboratory shall be an accredited laboratory for PCB analysis. The analysis method shall include extraction using EPA Method 3540C (Soxhlet Extraction) and analysis method SW846 8082.

Results of analysis shall be compared to the clearance objective which for unrestricted use shall be ≤ 1 ppm. If any location exceeds this clearance objective, additional removal will be conducted.

4 Schedule and Plan Certification

It is the intent of the Owner (Meriden Public Schools) to begin the removal of PCB Bulk Product Materials and Bulk PCB Remediation Waste during proposed construction in four separate phases beginning in the summer of 2013, and completing all work by 2017. Other non-PCB work will occur in the in the same time period in accordance with the overall construction plan. It is anticipated that the work shall be performed as expeditiously as possible including removal of PCB Bulk Product Waste followed by the removal of Bulk PCB Remediation Waste from adjacent surfaces. Upon completing the Bulk PCB Remediation Waste removal and verification sampling confirming the Project Objectives are met, the renovation project shall commence. **Additionally, no PCB Abatement work shall be performed while school is in session. The PCB Abatement work will be conducted while the school is vacant.**

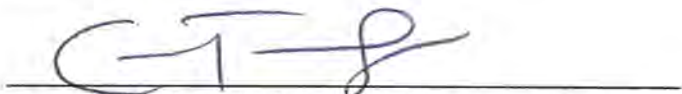

The Owner hereby certifies that all the sampling plans, sample collection procedures, sample preparation procedures, extraction procedures and instrumental/chemical analysis procedures used to assess or characterize the PCB contamination at the cleanup site, are on file at the School and available for EPA inspection.

PROJECT NUMBER: 20111127.A1E

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12A0201

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Platt High School, Meridan, CT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
0106EMM-01P	12A0201-01	Caulk	Skylight Glaze Cmpd. (1956)	SW-846 8082A	
0106EMM-02P	12A0201-02	Product/Solid	Tar at rolled sheet roof (1956 loc.23)	SW-846 8082A	
0106EMM-03P	12A0201-03	Product/Solid	Top layer rolled sheet roof (1956 loc.23)	SW-846 8082A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Elevated method reporting limit due to insufficient sample volume

Analyte & Samples(s) Qualified:

12A0201-14[0106EMM-14P], 12A0201-15[0106EMM-15P]

Elevated reporting limit due to matrix.

Analyte & Samples(s) Qualified:

12A0201-02[0106EMM-02P], 12A0201-06[0106EMM-06P], 12A0201-19[0106EMM-19P]

Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.

Analyte & Samples(s) Qualified:

Aroclor-1248

12A0201-15[0106EMM-15P]

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

12A0201-02[0106EMM-02P], 12A0201-19[0106EMM-19P]

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Aroclor-1016 [2C], Aroclor-1260 [2C]

B044154-BS1, B044154-BSD1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
DL-02	Elevated method reporting limit due to insufficient sample volume
DL-03	Elevated reporting limit due to matrix.
P-04	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.
V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

Sample Receipt Checklist

CLIENT NAME: Fuss And O'Neill RECEIVED BY: mx DATE: 1/9/12

1) Was the chain(s) of custody relinquished and signed?

(Yes)

No

No CoC Included

2) Does the chain agree with the samples?

(Yes)

No

If not, explain:

3) Are all the samples in good condition?

(Yes)

No

If not, explain:

4) How were the samples received:

On Ice ☒

Direct from Sampling ☐

Ambient ☐

In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)?

(Yes)

No

N/A

Temperature °C by Temp blank

Temperature °C by Temp gun

2.30C

5) Are there Dissolved samples for the lab to filter?

Yes

(No)

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples?

Yes

(No)

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

log-in

Permission to subcontract samples? Yes No

(Walk-in clients only) if not already approved

Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	<u>22</u>
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.

Analyte & Sample(s) Qualified:

Aroclor-1254 [2C]

12A0820-08[0123EMM-08P]

Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.

Analyte & Sample(s) Qualified:

Aroclor-1242

12A0820-18[0123EMM-18P]

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Sample(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

12A0820-01[0123EMM-01P]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
P-01	Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.
P-04	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: F+O CT RECEIVED BY: AP DATE: 1/26/12

- 1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included
2) Does the chain agree with the samples? Yes No
If not, explain:
3) Are all the samples in good condition? Yes No
If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.0°C

5) Are there Dissolved samples for the lab to filter?

Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples?

Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	<u>20</u>
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

Time and Date Frozen:

Do all samples have the proper Acid pH: Yes No N/A

Do all samples have the proper Base pH: Yes No N/A

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Initial continuing calibration standard was within method criteria. Closing continuing calibration standard was outside of method criteria, biased on the low side. Reanalysis yielded similar non-conformance, matrix interference was confirmed.

Analyte & Samples(s) Qualified:

12D0242-21[0406EMM-09C], 12D0242-22[0406EMM-10A], 12D0242-23[0406EMM-10B], 12D0242-24[0406EMM-10C], 12D0242-25[0406EMM-11A],
12D0242-26[0406EMM-11B], 12D0242-27[0406EMM-11C], 12D0242-28[0406EMM-12], 12D0242-29[0406EMM-13]

Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.

Analyte & Samples(s) Qualified:

Aroclor-1248 [2C]

12D0242-25[0406EMM-11A], 12D0242-26[0406EMM-11B], 12D0242-27[0406EMM-11C]

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

12D0242-14[0406EMM-07B], 12D0242-28[0406EMM-12]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian

Project Location: Platt H.S

Sample Description: Flashing Parapet (Under Metal) (1956)

Work Order: 12D0242

Date Received: 4/9/2012

Field Sample #: 0406EMM-13

Sampled: 4/6/2012 00:00

Sample ID: 12D0242-29

Sample Matrix: Bulk

Sample Flags: O-28

Polychlorinated Biphenyls with 3540 Soxhlet Extraction

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
O-28	Initial continuing calibration standard was within method criteria. Closing continuing calibration standard was outside of method criteria, biased on the low side. Reanalysis yielded similar non-conformance, matrix interference was confirmed.
P-01	Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Fuss & O'Neill RECEIVED BY: SD DATE: 4/9/12

1) Was the chain(s) of custody relinquished and signed? ☒ Yes No No CoC Included

2) Does the chain agree with the samples?
If not, explain: ☒ Yes No

3) Are all the samples in good condition?
If not, explain: ☒ Yes No

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? ☒ Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.3

5) Are there Dissolved samples for the lab to filter?

Yes ☒ No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples?

Yes ☒ No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No ☒ N/A

9) Do all samples have the proper Base pH: Yes No ☒ N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	<u>29</u>

ANALYTICAL SUMMARY

WORK ORDER NUMBER: 12F1044

The results of analyses performed on the following samples submitted to the CON-TEST Analytical Laboratory are found in this report.

PROJECT LOCATION: Meriden, CT

FIELD SAMPLE #	LAB ID:	MATRIX	SAMPLE DESCRIPTION	TEST	SUB LAB
0629EMM 11A	12F1044-01	Concrete	Ceiling Joint	SW-846 8082A	
0629EMM 11B	12F1044-02	Concrete	Ceiling Joint	SW-846 8082A	
0629EMM 11C	12F1044-03	Concrete	Ceiling Joint	SW-846 8082A	
0629EMM 12	12F1044-04	Concrete	Concrete Floor	SW-846 8082A	

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.

Analyte & Samples(s) Qualified:

Aroclor-1254, Aroclor-1260
12F1044-01[0629EMM 11A]

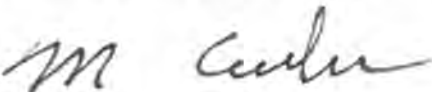

Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column.
All sample results are reported from the column within control criteria.

Analyte & Samples(s) Qualified:

Aroclor-1254, Aroclor-1260
12F1044-01[0629EMM 11A]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Michael A. Erickson

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
P-04	Due to continuing calibration non-conformance on the confirmatory detector, the lower of two results was reported.
V-24	Continuing calibration verification was outside of control limits on the confirmation column, but within control limits on the primary column. All sample results are reported from the column within control criteria.

Sample Receipt Checklist

CLIENT NAME: FUSS & O'Neil RECEIVED BY: JB DATE: 6/29/12

1) Was the chain(s) of custody relinquished and signed? ☒ Yes ☐ No No CoC Included

2) Does the chain agree with the samples?

If not, explain:

☒ Yes ☐ No

3) Are all the samples in good condition?

If not, explain:

☒ Yes ☐ No

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? ☒ Yes ☐ No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 2.7

5) Are there Dissolved samples for the lab to filter?

Yes ☒ No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples?

Yes ☒ No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No

(Walk-in clients only) if not already approved

Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No ☒ N/A

9) Do all samples have the proper Base pH: Yes No ☒ N/A

10) Was the PC notified of any discrepancies with the CoC vs the samples: Yes No ☒ N/A

Containers received at Con-Test

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8082A

Qualifications:

Initial continuing calibration standard was within method criteria. Closing continuing calibration standard was outside of method criteria, biased on the low side. Reanalysis yielded similar non-conformance, matrix interference was confirmed.

Analyte & Samples(s) Qualified:

12D0242-21[0406EMM-09C], 12D0242-22[0406EMM-10A], 12D0242-23[0406EMM-10B], 12D0242-24[0406EMM-10C], 12D0242-25[0406EMM-11A], 12D0242-26[0406EMM-11B], 12D0242-27[0406EMM-11C], 12D0242-28[0406EMM-12], 12D0242-29[0406EMM-13]

Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.

Analyte & Samples(s) Qualified:**Aroclor-1248 [2C]**

12D0242-25[0406EMM-11A], 12D0242-26[0406EMM-11B], 12D0242-27[0406EMM-11C]

The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Analyte & Samples(s) Qualified:**Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]**

12D0242-14[0406EMM-07B], 12D0242-28[0406EMM-12]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
O-28	Initial continuing calibration standard was within method criteria. Closing continuing calibration standard was outside of method criteria, biased on the low side. Reanalysis yielded similar non-conformance, matrix interference was confirmed.
P-01	Result was confirmed using a dissimilar column. Relative percent difference between the two results was >40%. The higher result was reported.
S-01	The surrogate recovery for this sample is not available due to sample dilution below the surrogate reporting limit required from high analyte concentration and/or matrix interferences.

Sample Receipt Checklist

CLIENT NAME: Fuss & O'Neill RECEIVED BY: SD DATE: 4/9/12

1) Was the chain(s) of custody relinquished and signed? ☒ Yes ☐ No No CoC Included

2) Does the chain agree with the samples?
If not, explain: ☒ Yes ☐ No

3) Are all the samples in good condition?
If not, explain: ☒ Yes ☐ No

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? ☒ Yes ☐ No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 5.3

5) Are there Dissolved samples for the lab to filter? Yes ☒ No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples? Yes ☒ No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No ☒ N/A

9) Do all samples have the proper Base pH: Yes No ☒ N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber <input checked="" type="radio"/> clear jar	<u>29</u>
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

- * QC result is outside of established limits.
- † Wide recovery limits established for difficult compound.
- ‡ Wide RPD limits established for difficult compound.
- # Data exceeded client recommended or regulatory level

Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.

Sample Receipt Checklist

CLIENT NAME: Fussione RECEIVED BY: CFC DATE: 3/8/12

1) Was the chain(s) of custody relinquished and signed? Yes No No CoC Included

2) Does the chain agree with the samples?

If not, explain:

3) Are all the samples in good condition?

If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? Yes No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 3.0

5) Are there Dissolved samples for the lab to filter?

Yes No

Who was notified _____ Date _____ Time _____

6) Are there any RUSH or SHORT HOLDING TIME samples?

Yes No

Who was notified _____ Date _____ Time _____

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No

(Walk-in clients only) if not already approved

Client Signature: _____

Containers received at Con-Test

	# of containers			# of containers
1 Liter Amber			8 oz amber/clear jar

Appendix D

Technical Specification Section

SECTION 020850 – PCB-CONTAINING MATERIAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.
- B. Reference is made to the Self-Implementing On-Site Cleanup and Disposal Plan for PCB Caulking Removal as prepared by Fuss & O'Neill, EnviroScience, LLC.
- C. Related Specification sections include Asbestos Abatement section 028213 and drawings HM-01 thru HM-07.

1.2 CONSULTANT

- A. The City of Meriden has retained Fuss & O'Neill EnviroScience, LLC (EnviroScience) as the Consultant for the purposes of construction administration and project monitoring during Hazardous Materials Abatement. The Consultant will represent the Owner in all phases of the abatement project at the discretion of the Owner. The Hazardous Materials Abatement Contractor shall regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items.

1.3 USE OF THE CONTRACT DOCUMENTS

- A. It shall be incumbent upon the Hazardous Materials Abatement Contractor to visit the Site and determine what exists, its condition, and what will be required to accomplish the Work intended by the Contract Documents. No increase in the Contract Sum will be permitted as a result of the Hazardous Materials Abatement Contractor's failure to visit the site and understand the existing conditions.
- B. All work shall comply with applicable Codes, laws, regulations, and ordinances wherever applicable. The most stringent of all the foregoing shall govern.
- C. It is not intended that the Specifications show every detail of the Work, but the Hazardous Materials Abatement Contractor shall be required to furnish within the Contract Sum all material and labor necessary for the completion of the Work in accordance with the intent of the Specifications.
- D. In case of ambiguity among the Contract documents, the more stringent requirement as determined by the Consultant shall prevail.
- E. The Work of this Contract includes making modifications as necessary, subject to approval by Owner in consultation with the Consultant, to correct any conflicts.
- F. All items, not specifically mentioned in the Specifications but implied by trade practices to complete the work, shall be included.

1.4 EXAMINATION OF THE SITE

- A. It is understood that the Hazardous Materials Abatement Contractor has examined the Site and made his/her own estimates of the facilities and difficulties attending the execution of the Work, and has based his price thereon.
- B. Except for unforeseeable concealed conditions as determined by the Consultant, the Hazardous Materials Abatement Contractor shall make no claim for additional cost due to the existing conditions at the site.

1.5 CONTRACTOR QUALIFICATIONS

- A. All bidders shall submit a record of prior experience in hazardous materials abatement projects, specifically including removal of PCB-containing materials listing no less than three (3) completed jobs in the past year, with all projects being of similar size and scope. The Hazardous Materials Abatement Contractor shall list the experience and training of the project foremen and all on-site personnel. The information that should be included is as follows:
 - 1. Project Name and Address
 - 2. Owner's Name and Address
 - 3. Architect/Consultant
 - 4. Contract Amount
 - 5. Date of Completion
 - 6. Extras and Changes
- B. Submit a written statement regarding whether the Hazardous Materials Abatement Contractor has ever been found out-of-compliance with federal or state regulations pertaining to worker protection, removal, transport, or disposal.

1.6 TESTING LABORATORY SERVICES

- A. The Hazardous Materials Abatement Contractor shall submit to the Consultant the name; address and qualifications of proposed laboratories intended to be utilized for sample analysis as required by this section.

1.7 ADDITIONAL GENERAL REQUIREMENTS

- A. The Hazardous Materials Abatement Contractor shall furnish all labor, materials, facilities, equipment, installation services, employee training, notifications, permits, licenses, certifications, agreements, and incidentals necessary to perform the specified work. Work shall be performed in accordance with the contract documents, the latest regulations from the Occupational Safety and Health Administration (OSHA), the United State Environmental Protection Agency (USEPA), and all other applicable federal, state, and local agencies. Whenever the requirements of the above references conflict or overlap, the more stringent provision shall apply.
- B. All project personnel engaged in the work covered under this section shall be trained in accordance with OSHA Regulations 29 CFR 1910.1000 and 29 CFR 1910.1200. It should also be noted that work associated with PCB removal may also involve exposure

during demolition and removal activities specified herein and the Hazardous Materials Abatement Contractor shall perform required exposure assessment for PCBs.

- C. The Hazardous Materials Abatement Contractor shall provide a Project Health and Safety Officer having a minimum of eight (8) hours of supervisor training in hazardous waste site operations in accordance with the requirements of 29 CFR 1910. The supervisor must be on site at all times during abatement work.
- D. This section specifies the procedures for removal of existing materials containing polychlorinated biphenyls (PCBs) less than ($<$) 50 parts per million (ppm) in the form of exterior window caulk (1968), exterior door caulk (1968), Interior window caulk (1968), black sink basin caulk (1968/1956), Blind flashing (1956), Interior expansion joint (1956/1968), mastic associated with cork under gymnasium wood floors (1968), Black tar vapor barrier under gymnasium floor (1968), Black vapor barrier under gymnasium wood floor (1956), caulking associated with exhaust vent (1956/1968) and disposal of removed materials as PCB-Bulk Product Waste.
- E. This section specifies the procedures for removal of existing materials containing polychlorinated biphenyls (PCBs) \geq 50 parts per million (ppm) in the form of Exterior window caulk- (1956), and Shellac/Varnish associated with the exercise gym wood floor (1968), and Interior slate window sill caulk (1968)
- F. Disturbance or removal of polychlorinated biphenyls (PCB) containing materials may cause a health hazard to workers and building occupants. The Hazardous Materials Abatement Contractor shall disclose to all of his workers, supervisory personnel, subcontractors, and consultants who will be at the job site of the seriousness of the hazard and of proper work procedures which must be followed.
- G. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb, or otherwise function in the immediate vicinity of polychlorinated biphenyls (PCB) containing materials, appropriate, continuous measures as necessary to protect all workers from the hazard of exposure shall be taken. Such measures shall include the procedures and methods described herein, regulations of the U.S. Occupational Safety and Health Administration (OSHA), U.S. Environmental Protection Agency (USEPA), and local requirements as applicable.
- H. The Hazardous Materials Abatement Contractor shall employ a Competent Person (Supervisor) with at least three (3) years' experience on projects of similar scope and magnitude who shall be responsible for all work involving hazardous materials abatement as described in the specifications and defined in applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the Competent Person as defined by OSHA regulations and have experience in the proper removal and disposal of PCB-containing materials.
- I. The Hazardous Materials Abatement Contractor shall allow the work of this contract to be inspected, if required, by local, state, federal, and any other authorities having jurisdiction over such work. The Hazardous Materials Abatement Contractor shall immediately notify the Owner and Consultant and shall maintain written evidence of such inspection for review by the Owner and Consultant.

- J. The Hazardous Materials Abatement Contractor shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The Hazardous Materials Abatement Contractor shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence.
- K. The Hazardous Materials Abatement Contractor shall immediately notify the Owner and Consultant of the delivery of all permits, licenses, certificates of inspection, of approval, or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless of who issued, and shall cause them to be displayed to the Owner and Consultant for verification and recording.
- L. The Hazardous Materials Abatement Contractor shall provide enough labor to guarantee completion of the work within the time frame given and within the normal operating vacation/Winter break hours of the school building.

1.8 SCOPE OF WORK

- A. Project Scope Locations and Work Statement: The project site is located at the Orville H. Platt High School, 220 Coe Avenue, Meriden, CT. Locations of work are also detailed on drawings HM-01-HM-07. The proposed removal and disposal activities to be performed by Remediation Contractor shall include the following:
 - 1. Site preparation and controls to facilitate remediation of PCBs. Containment procedures referenced for the abatement zone must be utilized for PCB Bulk Product Waste removal.
 - 2. Additionally, work involving the removal of PCB contaminated soil for disposal as Bulk PCB Remediation Waste if applicable.
 - 3. Remove existing interior and exterior window caulking, exterior window glazing compound(s), at all masonry window openings, and shellac/varnish associated with exercise gym wood floor (includes wood) for disposal as PCB Bulk Product Waste ≥ 50 ppm.
 - 4. Removal and off-site disposal of non-porous metal window and door assemblies including glass, PCB containing glazing compounds, panels, insulation etc. from all locations identified as PCB Bulk Product Waste ≥ 50 ppm. Non-porous surfaces (exterior steel beam/lintel) shall be cleaned to standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$.
 - 5. Removal of existing materials containing polychlorinated biphenyls (PCBs) less than ($<$) 50 parts per million (ppm) in the form of exterior window caulk (1968), exterior door caulk (1968), Interior window caulk (1968), Interior slate window sill caulk (1968), black sink basin caulk (1968/1956), Blind flashing (1956), Interior expansion joint (1956/1968), mastic associated with cork under gymnasium wood floors (1968), Black tar vapor barrier under gymnasium floor (1968), Black vapor barrier under gymnasium wood floor (1956), caulking associated with exhaust vent (1956/1968) and disposal of removed materials as PCB-Containing Waste < 50 ppm.
 - 6. Health and Safety in accordance with Occupation Safety and Health Administration (OSHA) requirements.
 - 7. Recordkeeping and distribution as required in accordance with 40 CFR part 761.125 (c) (5).

- B. PCB concentrations in excess of 50 mg/Kg (parts-per-million) of PCBs were detected in the following materials/locations:
1. Exterior window caulk – (1956)
 2. Shellac associated with gymnasium (Auxiliary Gym) wood floor (1968)
 3. Interior slate window sill caulk (1968)
- C. The following materials/locations contained greater than 1 mg/kg PCBs but less than 50 mg/kg PCBs and will be impacted by the planned demolitions:
1. Exterior window caulk at sash (1956)
 2. Exterior window glazing compound (1956)
 3. Exterior door caulk – adj. garage (1968)
 4. Exterior window caulk – Cafeteria wing (1968)
 5. Interior window caulk – (1956)
 6. Interior window caulk – (1968)
 7. Black sink basin caulk – (1956)
 8. Black sink basin caulk – (1968)
 9. Blind flashing – (1956)
 10. Blind flashing – (1968)
 11. Interior expansion CMU-Wall joint caulk (1956/1968)
 12. Mastic associated with cork under gymnasium wood floor (1968)
 13. Black tar vapor barrier under gymnasium wood/cork floor (1968)
 14. Black vapor barrier under gymnasium wood floor (1956)
 15. Roof-Caulk associated with exhaust vent (1956/1968)
- D. As a result, the Connecticut Department of Energy and Environmental Protection (DEEP) will require the waste to be handled as a PCB waste under State regulations (22a-463 through 22a-469. CTDEEP will also be notified via separate letter.

1.9 DEFINITIONS

- A. The following definitions as used within this technical specification as well as references to specific sections of the Code of Federal Regulation section 40 CFR Part 761 are provided. Definitions are extracted in part from 40 CFR Part 761.3; for full definitions refer to the specified section of the regulations:
1. Bulk PCB Remediation Waste means waste containing PCBs as a result of a spill, release, or other unauthorized disposal, at the following concentrations: Materials disposed of prior to April 18, 1978 that are currently at concentrations of ≥ 50 ppm PCBs, regardless of the concentration of the original spill; materials which are currently at any volume or concentration where the original source was ≥ 500 ppm PCBs beginning on April 18, 1978, or ≥ 50 ppm PCBs beginning on July 2, 1979; and materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under this part. PCB remediation waste means soil, rags, and other debris generated as a result of any PCB spill clean-up, as further defined in 40 CFR §761.3.

2. CERCLA means the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9601-9657).
3. Chemical waste landfill means a landfill at which protection against risk of injury to health or the environment from migration of PCBs to land, water, or the atmosphere is provided from PCBs and PCB items deposited therein by locating, engineering, and operating the landfill as specified in §761.75.
4. Cleanup Site means the areal extent of contamination and all suitable areas in very close proximity to the contamination necessary for implementation of a clean-up of PCB remediation waste, regardless of whether the site was intended for management of waste.
5. Containment means the enclosure within the building which establishes a contaminated area and surrounds the location where PCB and/or other toxic or hazardous substance removal is taking place and establishes a Control Work Area.
6. Designated Facility means the off-site disposer or commercial storer of PCB waste designated on the manifest as the facility that will receive a manifested shipment of PCB waste.
7. Disposals means intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB items; Disposal includes spills, leaks, and other uncontrolled discharges of PCBs as well as actions related to containing, transporting, destroying, degrading, decontaminating, or confining PCBs and PCB items.
8. DOT means the United States Department of Transportation.
9. EPA identification number means the 12-digit number assigned to a facility by the EPA upon notification of PCB waste activity under §761.205.
10. Excluded PCB products means PCB materials which appear at concentrations less than 50 ppm as defined in 40 CFR §761.3.
11. Fixed Object means mechanical equipment, electrical equipment, fire detection systems, alarms, and all other fixed equipment, fixtures, or other items which cannot be removed from the work area.
12. Generator of PCB waste means any person whose act or process produces PCBs that are regulated for disposal under subpart D of 40 CFR Part 761, or whose act first causes PCBs or PCB Items to become subject to the disposal requirements of subpart D, or who has physical control over the PCBs when a decision is made that the use of the PCBs has been terminated and therefore is subject to the disposal requirements of subpart D. Unless another provision of 40 CFR Part 761 specifically requires a site-specific meaning, "generator of PCB waste" includes all of the sites of PCB waste generation owned or operated by the person who generates PCB waste.
13. HEPA: High Efficiency Particulate Air filtration efficiency of 99.97 percent down to 0.3 microns. Filtration provided on specialized vacuums and air filtration devices to trap particles.
14. High occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is 840 hours or more (an average of 16.8 hours or more per week) for non-porous surfaces and 335 hours or more (an average of 6.7 hours or more per week) for bulk PCB remediation waste. Examples could include a residence, school, day care center, sleeping quarters, a single or multiple occupancy 40 hours per week work station, a school classroom, a cafeteria in an industrial facility, a control room, and a work station at an assembly line.

15. Incinerator means an engineered device using controlled flame combustion to thermally degrade PCBs and PCB Items. Examples of devices used for incineration include rotary kilns, liquid injection incinerators, cement kilns, and high temperature boilers.
16. Laboratory means a facility that analyzes samples for PCBs and is unaffiliated with any entity whose activities involve PCBs.
17. Liquid PCBs means a homogenous flowable material containing PCBs and no more than 0.5 percent by weight non-dissolved material.
18. Low occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).
19. Manifest means the shipping document EPA form 8700–22 and any continuation sheet attached to EPA form 8700–22, originated and signed by the generator of PCB waste in accordance with the instructions included with the form and subpart K of this part.
20. Mark means the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations.
21. Marked means the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations.
22. Municipal solid wastes means garbage, refuse, sludges, wastes, and other discarded materials resulting from residential and non-industrial operations and activities, such as household activities, office functions, and commercial housekeeping wastes.
23. Non-liquid PCBs means materials containing PCBs that by visual inspection do not flow at room temperature (25°C or 77°F) or from which no liquid passes when a 100 g or 100 ml representative sample is placed in a mesh number 60 \pm 5 percent paint filter and allowed to drain at room temperature for 5 minutes.
24. Non-porous surface means a smooth, unpainted solid surface that limits penetration of liquid containing PCBs beyond the immediate surface. Examples are: smooth un-corroded metal; natural gas pipe with a thin porous coating originally applied to inhibit corrosion; smooth glass; smooth glazed ceramics; impermeable polished building stone such as marble or granite; and high density plastics, such as polycarbonates and melamines, which do not absorb organic solvents.
25. On site means within the boundaries of a contiguous property unit.
26. PCB and PCBs means any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance. Refer to §761.1(b) for applicable concentrations of PCBs. PCB and PCBs as contained in PCB items are defined in §761.3. For any purposes under this part, inadvertently generated non-Aroclor PCBs are defined as the total PCBs calculated following division of the quantity of mono-chlorinated biphenyls by 50 and di-chlorinated biphenyls by 5.
27. PCB Article means any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. “PCB

- Article” includes capacitors, transformers, electric motors, pumps, pipes and any other manufactured item (1) which is formed to a specific shape or design during manufacture, (2) which has end use function(s) dependent in whole or in part upon its shape or design during end use, and (3) which has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the PCB Article.
28. PCB Article Container means any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs.
29. PCB Bulk Product Waste means waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal is ≥ 50 ppm PCBs. PCB bulk product waste does not include PCBs or PCB Items regulated for disposal under §761.60(a) through (c), §761.61, §761.63, or §761.64. PCB bulk product waste is further defined in 40 CFR §761.3.
30. PCB Capacitor means any capacitor that contains ≥ 500 ppm PCB. Concentration assumptions applicable to capacitors appear under §761.2.
31. PCB Container means any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs.
32. PCB-Contaminated means a non-liquid material containing PCBs at concentrations ≥ 50 ppm but < 500 ppm; a liquid material containing PCBs at concentrations ≥ 50 ppm but < 500 ppm or where insufficient liquid material is available for analysis, a non-porous surface having a surface concentration $> 10 \mu\text{g}/100 \text{ cm}^2$ but $< 100 \mu\text{g}/100 \text{ cm}^2$, measured by a standard wipe test as defined in §761.123.
33. PCB Equipment means any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures.
34. PCB Item means any PCB Article, PCB Article Container, PCB Container, PCB Equipment, or anything that deliberately or unintentionally contains or has as a part of it any PCB or PCBs.
35. PCB waste(s) means those PCBs and PCB Items that are subject to the disposal requirements of subpart D in 40 CFR Part 761.
36. Porous surface means any surface that allows PCBs to penetrate or pass into itself including, but not limited to, paint or coating on metal; corroded metal; fibrous glass or glass wool; unglazed ceramics; ceramics with a porous glaze; porous building stone such as sandstone, travertine, limestone, or coral rock; low-density plastics such as Styrofoam and low-density polyethylene; coated (varnished or painted) or uncoated wood; concrete or cement; plaster; plasterboard; wallboard; rubber; fiberboard; chipboard; asphalt; or tar paper. For purposes of cleaning and disposing of PCB remediation waste, porous surfaces have different requirements than non-porous surfaces.
37. RCRA means the Resource Conservation and Recovery Act (40 U.S.C. 6901 et seq.).
38. Standard wipe sample means a sample collected for chemical extraction and analysis using the standard wipe test as defined in §761.123. Except as designated elsewhere in part 761, the minimum surface area to be sampled shall be 100 cm^2 .

- 39. Storage for disposal means temporary storage of PCBs that have been designated for disposal.
- 40. SW-846 means the document having the title "SW-846, Test Methods for Evaluating Solid Waste,"
- 41. Totally enclosed manner means any manner that will ensure no exposure of human beings or the environment to any concentration of PCBs.
- 42. Transfer facility means any transportation-related facility including loading docks, parking areas, and other similar areas where shipments of PCB waste are held during the normal course of transportation. Transport vehicles are not transfer facilities under this definition, unless they are used for the storage of PCB waste, rather than for actual transport activities. Storage areas for PCB waste at transfer facilities are subject to the storage facility standards of §761.65, but such storage areas are exempt from the approval requirements of §761.65(d) and the recordkeeping requirements of §761.180, unless the same PCB waste is stored there for a period of more than 10 consecutive days between destinations.
- 43. Transporter of PCB waste means, for the purposes of subpart K of 40 CFR Part 761, any person engaged in the transportation of regulated PCB waste by air, rail, highway, or water for purposes other than consolidation by a generator.
- 44. Transport vehicle means a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (e.g., trailer, railroad freight car) is a separate transport vehicle.
- 45. TSCA means the Toxic Substances Control Act (15 U.S.C. 2601 et seq.).

1.10 SUBMITTALS

- A. The following documents shall be submitted immediately upon project award to the Owner prior to commencement of PCB Removal work:
 - 1. Site Specific Health and Safety Plan (HASP): The Remediation Contractor shall prepare a site specific HASP plan for protection of workers and control of the work site in accordance with OSHA regulatory requirements. The HASP shall govern all work conducted at the site during the abatement of PCB Paint and related debris; waste handling, sampling, waste management; and waste transportation. At a minimum, the HASP shall address the requirements set forth in 29 CFR 1910.120; as further outlined below:
 - a. Health and Safety Organization
 - b. Site Description and Hazard Assessment
 - c. Training
 - d. Medical Surveillance
 - e. Work Areas
 - f. Personal Protective Equipment
 - g. Personal Hygiene and Decontamination
 - h. Standard Operating Procedures and Engineering Controls
 - i. Emergency Equipment and First Aid Provisions
 - j. Equipment Decontamination
 - k. Air Monitoring
 - l. Telephone List
 - m. Emergency Response and Evacuation Procedures and Routes
 - n. Site Control
 - o. Permit-Required Confined Space Procedures
 - p. Spill prevention and Containment Plan

- q. Heat and Cold Stress
 - r. Record Keeping
 - s. Community Protection Plan
 - 2. Training Documentation: Documentation of OSHA 40-Hour HAZWOPER Training for all employees and subcontractors to be used for the abatement work, and 8-Hour HAZWOPER Supervisor Training for the designated on-site Health and Safety Officer for the abatement work.
 - 3. PCB and or other Toxic or Hazardous Substances Disposal Plan: A written plan that details the Remediation Contractor's plan for transportation and disposal of PCB-containing or other Toxic or Hazardous Substance wastes generated during the project. The Disposal Plan shall identify:
 - a. Waste packaging, labeling, placarding, and manifesting procedures.
 - b. The name, address, and 24-hour contact number for the proposed treatment or disposal facility or facilities to which waste generated during the project will be transported.
 - c. The name, address, contact person(s) and state-specific permit numbers for proposed waste transporters, and EPA identification number for firms that will transport waste.
 - d. The license plate numbers of vehicles to be used in transporting of the waste from the site to the disposal facility.
 - e. The route(s) by which the waste will be transported to the designated disposal facility, and states or territories through which the waste will pass.
 - 4. Material Safety Data Sheets: Material Safety Data Sheets (OSHA Form 174 or equivalent) and manufacturer's information shall be provided for all chemicals and materials to be used during the project including but not limited to specialty cleaners and chemical stripping products.
- B. The following documents shall be submitted to the Owner within fifteen (15) work days following removal of waste from the site:
- 1. Waste Profile Sheets
 - 2. Pre-Disposal Analysis Test Results (If required by disposal facility)
 - 3. Manifests signed by the disposal facility
 - 4. Tipping Receipts provided by the disposal facility
 - 5. Certification of Final Treatment/Disposal signed by the responsible disposal facility official.
- C. PCB Work Closeout Submittals:
- 1. Disposal Site Receipts: Copy of waste shipment record and disposal site receipt showing the PCB-containing or other Toxic or Hazardous Substances materials have been properly disposed.
- D. Product Data: Catalog sheets, specifications, and application instructions for any removal products, if used.

1.11 REGULATIONS AND STANDARDS

- A. The Hazardous Materials Abatement Contractor shall be solely responsible for conducting this project and supervising all work in a manner that will be in conformance

with all federal, state, and local regulations and guidelines pertaining to hazardous materials abatement. Specifically, The Hazardous Materials Abatement Contractor shall comply with the requirements of the following:

1. Toxic Substance Control Act (TSCA) (40 CFR Part 761).
2. Comprehensive Environmental Response, Compensation, and Liability Act (Superfund Law).
3. Department of Transportation (DOT) regulations - DOT regulation HM-181 regulates transportation of hazardous materials, including PCBs.
4. Occupational Safety and Health Administration (OSHA) - OSHA regulates workers' safety and exposure to a variety of chemicals including PCBs.
5. Connecticut Basic Building Code (BOCA) (including Connecticut Supplements);
6. Life Safety Code (NFPA); and
7. Local health and safety codes, ordinances or regulations pertaining to hazardous materials remediation and all national codes and standards including ASTM, ANSI, and Underwriter's Laboratories.

1.12 FINAL VISUAL CLEARANCE

- A. Following the completion of the work, the Consultant shall perform a visual inspection inside the work area per guidelines and State of Connecticut DEEP regulations.

1.13 POSTING AND RECORD MAINTENANCE REQUIREMENTS

- A. The following items shall be conspicuously displayed proximate but outside of abatement work areas.
 1. Exit Routes -Emergency exit procedures and routes
 2. Emergency Phone Numbers - A list indicating the telephone numbers and locations of the local hospital(s); the local emergency squad; the local fire department; the local police department; the Poison Control Center; Chemical Emergency Advise (CHEMTREC); the local Department of Health's local office; the Remediation Contractor (on-site and after hours numbers); and the environmental consultant (on-site and after hours numbers).
 3. Warning Signs - Warning signs shall be in English and the language of any workers onsite who do not speak English, and be of sufficient size to be clearly legible and display the following or similar language in accordance with 29 CFR 1910.1200:

**WARNING
HAZARDOUS WASTE WORK AREA
PCBs-POISON
NO SMOKING, EATING OR DRINKING
AUTHORIZED PERSONNEL ONLY
PROTECTIVE CLOTHING IS REQUIRED IN THIS AREA**

4. In addition, all entrances to work areas shall be posted with a PCB ML marker.
- B. The Hazardous Materials Abatement Contractor shall maintain the following items on-site and available for review by all employees and authorized visitors:
 1. Contractor's Project Specific Health and Safety Plan

2. Certificates of Training for all employees and the project Supervisor
 3. Codes, Standards and Publications
 4. Material Safety Data Sheets (MSDS/SDS) for all chemicals used during the project.
 5. Copies of The Hazardous Materials Abatement Contractor's written hazard communication, respiratory protection, and confined space entry programs.
- C. Fees, Permits, and Licenses. The Hazardous Materials Abatement Contractor shall pay all licensing fees, royalties, and other costs necessary for the use of any copyrighted or patented product, design, invention, or processing in the performance of the work specified in this Section.
1. The Hazardous Materials Abatement Contractor shall be solely responsible for costs, damages, or losses resulting from any infringement of these patent rights or copyrights. The Hazardous Materials Abatement Contractor shall hold the Owner and the Owner's Authorized Representative harmless from any costs, damages, and losses resulting from any infringement of these patent rights or copyrights.
 2. The Hazardous Materials Abatement Contractor shall be responsible for securing all necessary permits for work under this Section, including hauling, removal, and disposal, fire, and materials usage, or any other permits required to perform the specified work.

1.14 MINIMUM REQUIREMENTS FOR WORKER HEALTH AND SAFETY

- A. The Hazardous Materials Abatement Contractor is responsible and liable for the health and safety of all onsite personnel and the offsite community affected by the project. All onsite workers or other persons entering the abatement work areas, decontamination areas or waste handling and staging areas shall be knowledgeable of and comply with the requirements of the site specific Health and Safety Plan at all times. The Hazardous Materials Abatement Contractor's HASP shall comply with all applicable federal, state, and local regulations protecting human health and the environment from the hazards posed by the work to be performed under this project.
- B. Consistent disregard for the provisions of the HASP shall be deemed as sufficient cause for immediate stoppage of work and termination of the Contract or any Sub Contracts without compromise or prejudice to the rights of the Owner or the Owner's Authorized Representative.
- C. Any discrepancies between the Hazardous Materials Abatement Contractor's HASP and these specifications or federal and state regulations shall be resolved in favor of the more stringent requirements that provide the highest degree of protection to the project personnel and the surrounding community and environment
- D. In addition to exposure concerns relating to the presence of PCB's, other health and safety considerations will apply to the work. The Hazardous Materials Abatement Contractor shall be responsible for recognizing such hazards and shall be responsible for the health and safety of Contractor employees at all times. It is The Hazardous Materials Abatement Contractor's responsibility to comply with all applicable health and safety regulations.

- E. The HASP shall be reviewed by all persons prior to entry into the abatement, decontamination, or waste staging areas, whether a representative of The Hazardous Materials Abatement Contractor, owner, architect/engineer, environmental consultant, subcontractor(s), waste transporter or federal, state or local regulatory agency. Such review shall be acknowledged and documented by the Hazardous Materials Abatement Contractor's Health and Safety Officer by obtaining the name, signature and affiliation of all persons reviewing the HASP.
- F. The HASP shall be maintained so as to be readily accessible and reviewable by all site personnel throughout the duration of the abatement project and until all waste materials are removed from the site and disposed of at the appropriate disposal facility.
- G. The Hazardous Materials Abatement Contractor's on-site Health and Safety Officer shall be responsible for ensuring that project personnel and site visitors are informed of and comply with the provisions of the HASP at all times during the project.

1.15 WORK AREAS AND ZONES

- A. The Hazardous Materials Abatement Contractor shall lay-out and clearly identify work areas in the field. Access by equipment, site personnel, and the public to the work areas shall be limited as follows:
 - 1. Abatement Zone: The Abatement Zone(s) shall consist of all interior areas where removal of PCBs and other Toxic or Hazardous Substances and waste handling and staging activities are on-going and the immediately surrounding locale or other areas where contamination could occur. Each Abatement Zone for purposes of interior removal of PCB materials or other Toxic or Hazardous Substances for disposal shall be performed within a containment (refer to section 3.2) to isolate work areas from non-work areas. The containment shall be visibly delineated with appropriate warning signs at all approaches to Abatement (including a PCB ML marker), and be restricted from access by all persons except those directly necessary for the completion of the respective abatement tasks. The Abatement Zones shall be relocated and delineated as necessary as work progresses from one portion of the project site to another, to limit access to each abatement area and to minimize risk of exposure to site workers and the general public. Access shall be controlled at the periphery of the Abatement Zones to regulate the flow of personnel and equipment into and out of each zone and to help verify that proper procedures for entering and exiting are followed. All persons within the Abatement Zones shall wear the appropriate level of protection established in the HASP.
 - 2. Decontamination Zone: The Decontamination Zone is the transition zone between the abatement area and the clean support zone of the project site, and is intended to reduce the potential for contaminants from being dispersed from the Abatement Zone to clean areas of the site. The Decontamination Zone shall consist of a buffer area surrounding each Abatement Zone through which the transfer of equipment, materials, personnel, and containerized waste products will occur and in which decontamination of equipment, personnel, and clothing will occur. The Decontamination Zones shall be constructed as a three chamber decontamination unit for workers and a two chamber equipment room for waste load out as detailed in Section 3.3. All emergency response and first aid equipment shall be readily maintained in these Zones. All protective equipment

and clothing shall be removed or decontaminated in the Decontamination Zone prior to exiting to the Support Zone.

3. Support Zone: The Support Zone will consist of the area outside the Decontamination Zones and the remainder of the project site. Administrative and other support functions and any activities that by nature need not be conducted in the Abatement or Decontamination Zone related to the project shall occur in the Support Zone. Access to the Abatement and Decontamination Zones shall be controlled by the Health and Safety Officer and limited to those persons necessary to complete the abatement work and which have reviewed and signed the HASP.

1.16 PERSONNEL PROTECTIVE EQUIPMENT

- A. The Hazardous Materials Abatement Contractor shall be responsible to determine and provide the appropriate level of personal protective equipment in accordance with applicable regulations and standards necessary to protect the Hazardous Materials Abatement Contractor's employees from all hazards present.
- B. The Hazardous Materials Abatement Contractor shall provide all employees with the appropriate safety equipment and protective clothing to ensure an appropriate level of protection for each task, taking into consideration the chemical, physical, ergonomic and biological hazards posed by the site and work activities.
- C. The Hazardous Materials Abatement Contractor shall establish in the HASP criteria for the selection and use of personal protective equipment (PPE).
- D. The PPE to be utilized for the project shall be selected based upon the potential hazards associated with the project site and the work to be performed. Appropriate protective clothing shall be worn at all times within the Abatement Zone.
- E. The Hazardous Materials Abatement Contractor shall provide the appropriate level of respiratory protection to all field personnel engaged in activities where respiratory hazards exist or there is a potential for such hazard to exist.
- F. The Hazardous Materials Abatement Contractor shall provide, as necessary, protective coveralls, disposable gloves and other protective clothing for all personnel that will be actively involved in abatement activities or waste handling activities or otherwise present in the Abatement Zones. Coveralls shall be of Tyvek or equivalent material. Should the potential for exposure to liquids exist, splash resistant disposable suits shall be provided and utilized.
- G. Protective coveralls, and other protective clothing shall be donned and removed within the Decontamination Zone and shall be disposed of at the end of each day. Ripped coveralls shall be immediately replaced after appropriate decontamination has been completed to the satisfaction of the Health and Safety Officer. Protective clothing shall not be worn outside of the Decontamination Zone.
- H. Hard Hats, protective eyewear, rubber boots, and or other non-skid footwear shall be provided by The Hazardous Materials Abatement Contractor as required for workers and authorized visitors.

- I. All contaminated protective clothing, respirator cartridges and disposable protective items shall be placed into proper containers to be provided by the Hazardous Materials Abatement Contractor for transport and proper disposal in accordance with 40 CFR 262.

1.17 EMERGENCY EQUIPMENT AND FIRST AID REQUIREMENTS

- A. The Hazardous Materials Abatement Contractor shall provide and maintain at the site, at a minimum, the following Emergency and First Aid Equipment:
 1. Fire Extinguishers: A minimum one (1) fire extinguisher shall be supplied and maintained at the site by the Hazardous Materials Abatement Contractor throughout the duration of the project. Each extinguisher shall be a minimum of a 20 pound Class ABC dry fire extinguisher with Underwriters Laboratory approval per 29 CFR 1910.157.
 2. First Aid Kit: A minimum one (1) first aid kit meeting the requirements of 29 CFR 1910.151 shall be supplied and maintained at the site by The Hazardous Materials Abatement Contractor throughout the duration of the project.
 3. Communications: Telephone communications (either cellular or land line) shall be provided by the Hazardous Materials Abatement Contractor for use by site personnel at all times during the project.
- B. The Health and Safety Officer shall be notified immediately in the event of personal injury, potential exposure to contaminants, or other emergency. The Health and Safety Officer shall then immediately notify the Owner's Authorized Representative.

1.18 STANDARD SAFETY AND HEALTH PROCEDURES AND ENGINEERING CONTROLS

- A. The following provisions shall be employed to promote overall safety, personnel hygiene and personnel decontamination:
 1. Each Contractor or Subcontractor shall ensure that all safety equipment and protective clothing to be utilized by its personnel is maintained in a clean and readily accessible manner at the site.
 2. All prescription eyeglasses in use on this project shall be safety glasses conforming to ANSI Standard Z87.1. No contact lenses shall be allowed on the site.
 3. Prior to exiting the delineated Decontamination Zone(s), all personnel shall remove protective clothing, and place disposable items in appropriate disposal containers to be dedicated to that purpose. Following removal of PPE, personnel shall thoroughly wash and rinse their face, hands, arms and other exposed areas with soap and tap water wash and subsequent tap water rinse. A fresh supply of tap water shall be provided at the site on each work day by the Remediation Contractor for this purpose.
 4. All PPE used on site shall be decontaminated or disposed of at the end of each work day. Discarded PPE shall be placed in sealed DOT approved 55-gallon barrels for off-site disposal.
 5. Respirators, if necessary due to an upgrade to Level C PPE, shall be dedicated to each employee, and not interchanged between workers without cleaning and sanitizing.
 6. Eating, drinking, chewing gum or tobacco, smoking, and any other practice that increases the likelihood of hand to mouth contact shall be prohibited within the

delineated abatement and decontamination work zones. Prior to performing these activities, each employee shall thoroughly cleanse their face, hands, arms and other exposed areas.

7. All personnel shall thoroughly cleanse their face hands, arms and other exposed areas prior to using toilet facilities.
 8. No alcohol, tobacco, illicit drugs or firearms will be allowed on the site at any time.
 9. Contact with potentially contaminated surfaces should be avoided, if possible. Field personnel should minimize walking through standing water/puddles, mud or other wet or discolored surfaces; kneeling on ground; and placing equipment, materials or food on ground or other potentially contaminated surface.
 10. The use of the "Buddy System shall be employed at all times while conducting work at the site. Each employee shall frequently monitor other workers for signs of heat stress or chemical exposure or fatigue; periodically examine others PPE for signs of wear or damage; routinely communicate with others; and notify the Health and Safety Officer in the case of an emergency.
- B. Workers must wear protective suits, protective gloves, eye protection and a minimum of half-face respirator with HEPA filter cartridge for all projects. Respiratory protection shall be in accordance with OSHA regulation 1910.134 and ANSI Z88.2.
- C. Workers must be trained as per OSHA and USEPA requirements, have medical clearance and must have recently received pulmonary function test (PFT) and respirator fit tested by a trained professional.
1. A personal air sampling program shall be in place as required by OSHA.
 2. The use of respirators must also follow a complete respiratory protection program as specified by OSHA.

1.19 INDEPENDENT INSPECTION AND MONITORING

- A. This section describes independent visual inspection and monitoring work being performed on behalf of the Owner. This work is not in the Contract Sum. This section describes monitoring carried out by the Owner's Consultant (EnviroScience) to verify that the building beyond the work area and the outside environment remains uncontaminated.
- B. The purpose of the Owner's Consultant's monitoring is to detect faults in the work area isolation such as:
1. Contamination of the building outside of the work area by PCB dust.
 2. Failure of filtration or rupture in the differential pressure system
 3. Contamination of the outside of the containment.

Should any of the above occur, the Hazardous Materials Abatement Contractor shall immediately cease abatement activities until the fault is corrected. Do not recommence work until authorized by the Owner's Consultant.

- C. The Owner's Consultant may monitor the Work Area. The purpose of this monitoring will be to detect dust outside containment, which may challenge the ability of the Work

Area isolation procedures to protect the balance of the building or outside of the building from contamination.

- D. The Owner's Consultant will perform on-site monitoring throughout the course of the project, as follows:
1. All work procedures shall be continuously monitored by the Consultant to assure that areas outside the designated work locations in the buildings will not be contaminated.
 2. Prior to work on any given day, the Hazardous Materials Abatement Contractor's designated "competent person" shall discuss the day's work schedule with the Consultant to evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination of the building or the employees. This includes a visual survey of the work area and the decontamination enclosure systems.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.
- B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with PCBs shall be decontaminated or disposed of as PCB waste.
- C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating 6 mil.
- D. Polyethylene disposable bags shall be six (6) mil with pertinent pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.
- E. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.
- F. Cleaning Products: Contractor shall at their discretion utilize specialty cleaning products such as Capsur, TechXtract or other cleaners for use in decontaminating porous and non-porous surfaces to remain. All such products shall be utilized in accordance with manufacturer's specifications as intended. Remediation Contractor shall ensure appropriate use and disposal associated with use in accordance with the MSDS/SDS sheets for each product utilized.
- G. The Hazardous Materials Abatement Contractor shall have available spray equipment capable of mixing wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with PCBs.

- H. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where PCB-containing materials may be disturbed.

2.2 TOOLS AND EQUIPMENT

- A. The Hazardous Materials Abatement Contractor shall provide all tools and equipment necessary for PCB removal.
- B. The Hazardous Materials Abatement Contractor's air monitoring professional shall have air-monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.
- C. The Hazardous Materials Abatement Contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape and air filters.
- D. The Hazardous Materials Abatement Contractor shall provide (as needed) temporary electrical power panels, electrical power cables, and electrical power sources (such as generators). Any electrical connection work affecting the building electrical power system shall be performed by a State of Connecticut licensed electrician.
- E. The Hazardous Materials Abatement Contractor shall have available shower stalls and plumbing to support same to include sufficient hose length and drain system or an acceptable alternate.
- F. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of -0.02 inches of water within enclosure with respect to outside area. Equipment shall be checked for proper operation by smoke tubes or differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.
- H. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all mono-dispersed particles of 0.3 micrometers in diameter or larger.

PART 3 – EXECUTION

3.1 PRE-ABATEMENT MEETING

- A. At least one week prior to the start of work a Pre-Construction Meeting will be scheduled and must be attended by the Hazardous Materials Abatement Contractor and any Sub-Contractors. The assigned Contractor Site Supervisor is also required to attend this meeting.
- B. The Hazardous Materials Abatement Contractor shall present a detailed project schedule and project submittals at the Pre-Construction Meeting. Variations, amendments, and corrections to the presented schedule will be discussed, and the Owner and Consultant

will inform the Hazardous Materials Abatement Contractor of any scheduling adjustments for this project.

- C. Following the Pre-Construction Meeting, the Hazardous Materials Abatement Contractor shall submit a revised schedule (if needed) no later than three days after the meeting.

3.1 WORK AREA PROTECTION – ABATEMENT ZONE

- A. Protection of Existing Construction: Perform PCB Containing Materials removal work without damage or contamination of adjacent areas, soil, and existing construction.
- B. Prior to commencement of PCB abatement activities at each work area, a containment system shall be constructed by the Hazardous Materials Abatement Contractor to capture and contain all materials removed during the abatement. Containment procedures referenced for the abatement zone must be utilized for PCB Removal.
- C. During all remediation activities, Contractor shall maintain control of all entrances and exits to the project site to ensure only authorized personnel enter the work areas and are afforded proper personal protective equipment and as required respiratory protection. All approaches to work areas shall be demarcated with appropriately worded warning signs.
- D. Work zones shall be established in accordance with this section to include abatement zone, decontamination zone and support zone.
- E. Ground protection to prevent debris from escaping the abatement zone and to protect areas outside of abatement zone from PCB contamination shall be utilized. Protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during removal of window systems from the building exterior. The membrane shall be covered with a single layer of 6-mil polyethylene sheeting securely fastened to foundation.
- F. All other openings to the building interior, such as unit ventilation, ducts, and grilles, shall be securely sealed with a single layer of 6-mil polyethylene sheeting from the building exterior. Refer to technical specification section for requirements.
- G. For interior removal of PCB Containing Materials a full containment shall be established with isolation barriers at all openings to the work area, floor covering and wall covering to the extent required to conduct removal of windows from inside the building. The containment area shall be placed under negative pressure as described below.
- H. Negative Pressure: Air is to be drawn into the exterior enclosure under all anticipated conditions and exhausted through a HEPA filter during daily operations when dust generating methods for removing PCB Containing Material for the duration of the activity and for a period of not less than 1 hour after The design parameters for static pressure differentials between the inside and outside of enclosures shall be in a range from 0.02 to 0.10 inches of water gauge, depending on conditions. All zones inside the enclosure must have less pressure than the ambient pressure outside of the enclosure (-0.02 inches water gauge differential).

1. Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB removal. All debris generated during operations including but not limited to visible caulking, dust and debris shall be HEPA vacuumed continuously throughout the work shift and at the end of a work shift to avoid accumulation. Any tears or rips that occur in protections shall be repaired or removed and replaced with new protections.
2. Warning Signage: Post warning signs in accordance with 29 CFR 1910.1200 at all approaches to the work area. Signs shall be conspicuously posted to permit a person to read signs and take precautionary measures to avoid exposure to PCBs or other Toxic or Hazardous Substances. These signs should include the PCB ML markers at each entrance to the work area.
3. Waste Containers for PCB Bulk Product Waste: Appropriate PCB waste containers shall be placed adjacent to abatement zones. Containers shall be lined, covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part 761.40 and 45. Marking shall include a PCB ML marker.

3.3 DECONTAMINATION SYSTEM

- A. The Hazardous Materials Abatement Contractor shall establish contiguous to the work area, a decontamination enclosure consisting of equipment room, shower room, and clean room in series. The only access between contaminated and uncontaminated areas shall be through this decontamination enclosure. If it is not feasible to set-up a contiguous decontamination unit, the Hazardous Materials Abatement Contractor shall establish a remote decontamination unit.
- B. Access between rooms in the decontamination system shall be through double flap curtain openings. The clean room, shower and equipment room within the decontamination enclosure, shall be completely sealed ensuring that the sole source of airflow through this area originates from uncontaminated areas outside the work area.
- C. The Hazardous Materials Abatement Contractor shall establish contiguous with the work area an equipment decontamination enclosure consisting of two (2) totally enclosed chambers divided by double flap curtained opening. This enclosure must be constructed so as to ensure no personnel enter or exit through this unit.
- D. Occupied areas and/or building space not within the work areas shall be separated from PCB abatement work areas by means of airtight barriers.
- E. Construct the decontamination system with wood or metal framing, 3/8" sheathing and cover both sides with a double layer of six (6) mil polyethylene sheeting, spray glued or taped at the joints. Caulk joints watertight at floor, walls, and ceiling.
- F. The Hazardous Materials Abatement Contractor and the Consultant shall visually inspect barrier several times daily to assure effective seal and the Hazardous Materials Abatement Contractor shall repair defects immediately.

3.4 BULK PRODUCT WASTE REMOVAL – PCB \geq 50 PPM

- A. PCB Bulk Product Waste Materials including exterior window caulking (1956), Shellac/Varnish associated with the exercise (small) gym wood floor, and the interior slate window sill caulk (1968), including slate sill shall be handled and removed from specified locations for proper disposal
- B. Materials shall be removed in a manner which does not breakdown the materials into fine dust or powder to the extent feasible. Equipment and tools to be utilized shall include hand tools and mechanical equipment such as demolition hammers. Mechanical removal equipment shall as appropriate be fitted with dust collection systems.
- C. Any dry or brittle caulking materials or other Bulk Product waste containing PCB \geq 50 ppm shall be removed with additional engineering controls such as use of a HEPA vacuum to remove accumulated dust or debris during removal.
- D. Once removed, materials shall be placed in lined containers or into appropriate temporary containers such as 6-mil polyethylene disposal bags for controlled transport to PCB waste containers at the end of each work shift. PCB Bulk Product Waste shall be stored for disposal in accordance with 40 CFR Part §761.65 and marked in accordance with 40 CFR Part §761.40 and §761.45.
- E. The use of minimal quantities of water to moisten the generated dust prior to collection shall be utilized. Under no circumstances shall the PCB waste show evidence of free liquid water, pooling, or ponding within the waste stream. Any liquid used to wet the dust and debris to control fugitive emissions shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with 40 CFR Part §761.60 (a).

3.5 CLEANING AND DECONTAMINATION

- A. The Hazardous Materials Abatement Contractor shall be responsible for complete cleaning and decontamination of the Abatement Zone upon completion of work. The Abatement Zone will be required to meet proposed final visual inspection requirements.
- B. The Hazardous Materials Abatement Contractor shall utilize HEPA vacuum and wet cleaning products to remove all visible dust and debris from all surfaces within the work area. If specialty products are utilized the Hazardous Materials Abatement Contractor shall utilize in accordance with manufacturer's specifications including any additional safety and disposal requirements for such use.
- C. Cleaning of containment barriers shall be performed prior to removal leaving critical barriers at openings, decontamination units and negative air filtration devices in place until results of post verification sampling indicate acceptable limits. Cleaning shall be performed from ceiling to floors.
- D. Any liquid used to wet the dust and debris to control fugitive emissions shall be collected and decontaminated in accordance with 40 CFR Part §761.79 (b) (1) or disposed of in accordance with §761.60 (a).

- E. All rags and other cleaning materials used to clean shall also be properly disposed as PCB Remediation Waste. All PCB Remediation Waste shall be disposed of in accordance with 40 CFR Part § 761.61(a)(5)(i)(B)(2)(iii). All waste containers shall comply with 40 CFR § 761.65 and shall be appropriately labeled in accordance with 40 CFR Part § 761.40 and § 761.45.
- F. Equipment to be utilized in connection with the removal of PCB Containing Materials including waste collection or that will or may come in direct contact with the site contaminants shall be decontaminated prior to leaving the site to prevent migration of the contaminated residues from the project site. Decontamination shall be in accordance with 40 CFR Part §761.79 and Sub-part S procedures.
- G. All non-disposable equipment and tools employed in the course of the project will be decontaminated at the conclusion of each work day through the following sequence:
 - 1. Initial tap water rinse, to remove gross soil
 - 2. Tap water and hexane or equivalent wash
 - 3. Tap water rinse
 - 4. Second tap water and hexane or equivalent wash
 - 5. Second tap water rinse
- H. The wash water and decontamination liquids shall be captured and containerized in DOT approved 55-gallon barrels for off-site disposal.

3.6 CONSULTANT'S RESPONSIBILITIES

- A. Air sampling shall be conducted by the Consultant to ascertain the integrity of controls that protect the building from PCB contamination. Independently, the Hazardous Materials Abatement Contractor shall monitor air quality within the work area to ascertain the protection of employees and to comply with OSHA regulations.
- B. The Consultant's project monitor shall provide continual evaluation of the condition of the building during removal, using his/her best professional judgments in respect to the State of Connecticut Department of Environmental Protection guidelines.

3.7 CONSULTANT'S INSPECTION RESPONSIBILITIES

- A. Consultant shall conduct inspection throughout the progress of the abatement project. Inspections shall be conducted in order to document the progress of the abatement work as well as the procedures and practices employed by the Hazardous Materials Abatement Contractor.
- B. The Consultant shall perform the following inspections during the course of abatement activities:
 - 1. Pre-commencement Inspection. Pre-commencement inspections shall be performed at the time requested by the abatement Contractor. The Consultant shall be informed 12 hours prior to the time the inspection is needed. If, during the course of the pre-commencement inspection, deficiencies are found, the Hazardous Materials Abatement Contractor shall perform the necessary adjustments in order to obtain compliance.

2. Work Area Inspections. Work area inspections shall be conducted on a daily basis at the discretion of the Consultant. During the course of the work inspections, the Consultant shall observe the Hazardous Materials Abatement Contractor's removal procedures, verify barrier integrity, monitor negative air filtration devices, assess project progress, and inform the abatement Contractor of specific remedial activities if deficiencies are noted.
3. Final Visual Inspection. The Consultant, upon the request of the abatement Contractor, shall conduct final visual inspection. The final visual inspection shall be conducted after completion of the final cleaning procedures. The final visual inspection shall verify that all PCB Containing Material and residual debris have been removed from the work area. If, during the course of the inspection, the Consultant identifies residual dust or debris, the Hazardous Materials Abatement Contractor shall comply with the request of the Consultant in order to render the area "dust free".

3.8 MARKING OF WASTE CONTAINERS

- A. All waste containers must be marked with the name of the waste contained; the date in which the first material was placed in the vessel; and the last date at which addition of waste occurred. All waste containers must be marked with a PCB ML marker.
- B. All waste containers containing PCB Waste and contaminated debris, containment system components, used personnel protective equipment, personal and equipment wash water and decontamination fluids, or other wastes generated during the abatement work shall be labeled as follows:

DOT Class 9 UN3432 (solid)
Or UN2315 (liquid) PCB Waste
RQ

Waste for Disposal

Federal law prohibits improper disposal.

If found, contact the nearest police or public safety authority or
the U.S. Environmental Protection Agency.

- a. Generator's Information: _____
- b. Manifest Tracking No.: _____
- c. Accumulation Start Date: _____
- d. EPA ID No.: _____
- e. EPA Waste No.: _____
- f. Total Weight: _____
- g. Container No.: _____

HANDLE WITH CARE!

In addition, these containers must be marked with a PCB M_L marker.

- C. Such marking must be durable, in English and printed on or affixed to the surface of the package or on a label, tag or sign; displayed on a background of sharply contrasting color; un-obscured by labels or attachments and located away from any other marking (such as advertising) that could substantially reduce its effectiveness.

3.9 ON-SITE WASTE MANAGEMENT AND DISPOSAL OF SOLID HAZARDOUS WASTES

- A. All solid waste material, containment system components, used personnel protective equipment, and other solid wastes generated during the work, shall be placed directly in appropriate waste receptacles immediately upon removal from its in-situ position. Suitable waste receptacles may consist of roll-off containers or DOT-approved 55-gallon barrels.
- B. The Hazardous Materials Abatement Contractor shall be responsible for all packaging, labeling, transport, disposal, and record-keeping associated with PCB or PCB contaminated waste in accordance with all federal, state, and local regulations.
- C. The Hazardous Materials Abatement Contractor shall ensure that the person transporting the waste holds a valid permit issued in accordance with appropriate federal, state, and local regulations.
- D. The Hazardous Materials Abatement Contractor shall provide to the transporter at the time of transfer appropriate shipping records or uniform waste manifests as required by the federal, state, and local regulations with a copy to the Owner and Owner's Authorized Representative.
- E. The Hazardous Materials Abatement Contractor shall maintain proper follow up procedures to assure that waste materials have been received by the designated waste site in a timely manner and in accordance with all federal, state, and local regulations.
- F. The Hazardous Materials Abatement Contractor shall assure that disposal of polychlorinated biphenyls (PCB) containing waste material is at a facility approved to accept such waste and shall provide a tracking/manifest form signed by the landfill's authorized representative.
- G. If roll-off containers are to be utilized for containerization of the abatement wastes the following shall apply:
 - 1. All roll-off containers or other similar vessels utilized shall be watertight and lined with 6-mil polyethylene sheeting or equivalent impermeable lining, and equipped with a secured and impermeable cover.
 - 2. The impermeable cover shall remain securely in place at all times when material is not being actively placed in the vessels. The Remediation Contractor shall be responsible for ensuring that the cover remains securely intact until the container is removed from the site.
- H. If 55-Gallon barrels are to be utilized for waste containerization, the barrels shall consist of suitable DOT-approved 55-gallon barrels that are watertight and free of corrosion, perforations, punctures, or other damage. All barrels shall be securely covered and sealed at the conclusion of each work day.
- I. The waste containers shall remain staged at the site with a secure impermeable cover in place until the materials are transported from the site to be delivered to the designated disposal facility.
- J. A waste roll-off and barrel staging area shall be designated prior to initiation of the abatement work, and approved by the Owner's Authorized Representative.

- K. Materials containing <50 ppm will be transported to one of the following facilities:
1. A facility permitted, licensed, or registered by a State to manage municipal solid waste subject to part 40 CFR Part §761.258.
 2. A facility permitted, licensed, or registered by a State to manage non-municipal non-hazardous waste subject to 40 CFR Part §761. 257.5 through 257.30, as applicable.
 3. A hazardous waste landfill permitted by EPA under section 3004 of RCRA, or by a State authorized under section 3006 of RCRA.
 4. Waste manifests must show chain of custody. Provide required copies of the waste shipment records for wastes to the Owner as required.
- L. Any PCB Liquid Water Waste shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with 40 CFR Part §761.60 (a).
- M. Any chemicals, solvents or other products used during decontamination shall be properly containerized as PCB Liquid Waste. Waste must be properly decontaminated or disposed in accordance with 40 CFR Part §761.60 (a) or 40 CFR Part §761.79 (g). PCB Liquid Waste shall be transported by a licensed hauler and shipped for treatment or disposal. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.
- N. All contaminated waste shall be carefully loaded on trucks or other appropriate vehicles for transport. Before and during transport, care shall be exercised to insure that no unauthorized persons have access to the material.
- O. Transporters of the waste are prohibited from “back hauling” any freight after the disposition of the Owner’s waste stream until decontamination of the vehicle and/or trailer is assured.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

TO-10A/EPA 680 Modified

Qualifications:

Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.

Analyte & Samples(s) Qualified:

Tetrachloro-m-xylene

B050536-BLK1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

Daren J. Damboragian
Laboratory Manager

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
S-20	Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.

Sample Receipt Checklist

CLIENT NAME: FUSS + O'Neill RECEIVED BY: SD DATE: 4/26/12

- 1) Was the chain(s) of custody relinquished and signed? ☒ Yes ☐ No No CoC Included
2) Does the chain agree with the samples? ☒ Yes ☐ No
If not, explain:
3) Are all the samples in good condition? ☒ Yes ☐ No
If not, explain:

4) How were the samples received:

On Ice ☒ Direct from Sampling ☐ Ambient ☐ In Cooler(s) ☒

Were the samples received in Temperature Compliance of (2-6°C)? ☒ Yes ☐ No N/A

Temperature °C by Temp blank _____ Temperature °C by Temp gun 4.0

5) Are there Dissolved samples for the lab to filter?

Who was notified _____ Date _____ Time _____ Yes ☒ No

6) Are there any RUSH or SHORT HOLDING TIME samples?

Who was notified _____ Date _____ Time _____ Yes ☒ No

7) Location where samples are stored:

19

Permission to subcontract samples? Yes No
(Walk-in clients only) if not already approved
Client Signature: _____

8) Do all samples have the proper Acid pH: Yes No ☒ N/A

9) Do all samples have the proper Base pH: Yes No ☒ N/A

Containers received at Con-Test

	# of containers		# of containers
1 Liter Amber		8 oz amber/clear jar	
500 mL Amber		4 oz amber/clear jar	
250 mL Amber (8oz amber)		2 oz amber/clear jar	
1 Liter Plastic		Air Cassette	
500 mL Plastic		Hg/Hopcalite Tube	
250 mL plastic		Plastic Bag / Ziploc	
40 mL Vial - type listed below		PM 2.5 / PM 10	
Colisure / bacteria bottle		PUF Cartridge	<u>9</u>
Dissolved Oxygen bottle		SOC Kit	
Encore		TO-17 Tubes	
Flashpoint bottle		Non-ConTest Container	
Perchlorate Kit		Other glass jar	
Other		Other	

Laboratory Comments:

40 mL vials: # HCl _____ # Methanol _____
Bisulfate _____ # DI Water _____
Thiosulfate _____ Unpreserved _____

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

Revised Report on 5/4/2012 with wipe units reported in ug/100 cm².

EPA 680 Modified

Qualifications:

Analyte is found in the associated blank as well as in the sample.

Analyte & Samples(s) Qualified:

Hexachlorobiphenyls, Pentachlorobiphenyls, Tetrachlorobiphenyls, Total Polychlorinated biphenyls

12D0938-12[0425EMM-12W], 12D0938-13[0425EMM-13W], 12D0938-14[0425EMM-14W], 12D0938-29[0425EMM-29W], B050564-BLK1, B050564-BS1, B050564-BSD1, 12D0938-15[0425EMM-15W], 12D0938-16[0425EMM-16W], 12D0938-17[0425EMM-17W], 12D0938-19[0425EMM-19W], 12D0938-20[0425EMM-20W], 12D0938-25[0425EMM-25W], 12D0938-27[0425EMM-27W], 12D0938-18[0425EMM-18W]

Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.

Analyte & Samples(s) Qualified:

Tetrachloro-m-xylene

B050532-BLK1

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Dichlorobiphenyls, Monochlorobiphenyls, Trichlorobiphenyls

B050532-BS1, B050532-BSD1, 12D0938-07[0425EMM-07W]

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

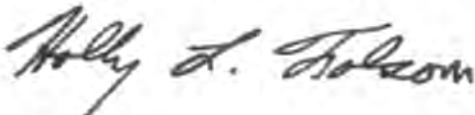

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Dichlorobiphenyls, Monochlorobiphenyls, Trichlorobiphenyls

12D0938-12[0425EMM-12W], 12D0938-13[0425EMM-13W], 12D0938-21[0425EMM-21W], 12D0938-22[0425EMM-22W], 12D0938-23[0425EMM-23W], 12D0938-24[0425EMM-24W], 12D0938-25[0425EMM-25W], 12D0938-26[0425EMM-26W], 12D0938-27[0425EMM-27W], 12D0938-28[0425EMM-28W], 12D0938-29[0425EMM-29W], 12D0938-30[0425EMM-30W], 12D0938-31[0425EMM-31W], 12D0938-01[0425EMM-01W], 12D0938-02[0425EMM-02W], 12D0938-03[0425EMM-03W], 12D0938-04[0425EMM-04W], 12D0938-05[0425EMM-05W], 12D0938-06[0425EMM-06W], 12D0938-07[0425EMM-07W], 12D0938-08[0425EMM-08W], 12D0938-09[0425EMM-09W], 12D0938-10[0425EMM-10W], 12D0938-11[0425EMM-11W], B050532-BLK1

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
*†	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
B	Analyte is found in the associated blank as well as in the sample.
S-20	Surrogate recovery is outside of control limits. Sample media does not allow for re-extraction.
V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

MAR 18 2013

Mr. Michael Grove
Assistant Superintendent for the Meriden Public Schools
22 Liberty Street
Meriden, Connecticut 06450

Re: PCB Cleanup and Disposal Approval under 40 CFR §§ 761.61(a) and (c)
and § 761.79(h)
Orville H. Platt High School
Meriden, Connecticut

Dear Mr. Grove:

This is in response to the Meriden Public School (MPS) Notification¹ for approval to clean up and dispose of PCB-contaminated building materials located in the building known as the Orville H. Platt High School (the Site) located at 220 Coe Avenue, Meriden, Connecticut. The Site contains PCB-contaminated materials that exceed the allowable PCB levels under the federal PCB regulations at 40 CFR § 761.20(a), § 761.61 and § 761.62.

In its Notification, MPS has proposed the following PCB cleanup and disposal plan:

- Remove *PCB bulk product waste* (i.e., exterior/interior window caulk (1956 and 1968 sections), slate window sill caulk and sill (1968 section), and 1968 gym floor, including the shellac, mastic, and vapor barrier, and dispose of the PCB waste in a TSCA-approved or RCRA hazardous waste landfill;
- Remove window assemblies in contact with the PCB caulk, including transite panels and insulation, and dispose of as *PCB remediation waste* greater than or equal to (\geq) 50 parts per million (ppm) in accordance with § 761.61 (a)(5)(i)(B)(2)(iii);

¹ The Notification was prepared by Fuss & O'Neill on behalf of Meriden Public Schools to satisfy the notification requirement under 40 CFR § 761.61(a)(3). Information was submitted dated October 2, 2012 (Self-Implementing On-Site Cleanup and Disposal Plan (SIDP)); February 19, 2013 (Revised SIDP and Response to Comments); March 4, 2013 (2nd Revised SIDP and Response to Comments); March 5, 2013 (3rd Revised SIDP and Response to Comments); March 6, 2013 (email response to questions); March 13, 2013 (email response to questions); and March 14, 2013 (email clarification of verification sampling). These submittals shall be referred to as the "Notification".

- Remove caulk and black tar with less than ($<$) 50 ppm PCBs, and adjacent *porous surface* (i.e., 16 inches concrete block) from the interior expansion joint in the corridor of the 1956/1968 sections of the building and dispose of as $<$ 50 ppm *PCB remediation waste* in accordance with § 761.61(a)(5)(i)(B)(2)(ii);
- Remove caulk with $<$ 50 ppm PCBs from the exhaust vents and dispose of as $<$ 50 ppm *PCB remediation waste* in accordance with § 761.61(a)(5)(i)(B)(2)(ii);
- Decontaminate steel lintels and the exhaust vents that will remain to a standard of $\leq 1 \mu\text{g}/100 \text{ cm}^2$; and,
- Conduct verification sampling to confirm that the PCB cleanup standards have been met.

MPS has determined that certain PCB-contaminated building products, which have a PCB concentration at $<$ 50 ppm, meet the criteria for an *Excluded PCB Product* under § 761.3. Under the PCB regulations, *Excluded PCB Products* are authorized for use and thus there is no requirement for removal of the caulk or decontamination of surfaces that are in contact with the $<$ 50 ppm PCB-contaminated building products. While these building products are not addressed in the Approval, the MPS is in discussion with Connecticut Department of Energy and Environmental Protection (CTDEEP) concerning its requirements for management of these materials.

With the exception of the proposed verification sampling frequency for decontaminated *porous surfaces* (i.e., interior corridor expansion joints and window openings), the Notification meets the requirements and standards established under §§ 761.61(a), 761.62, and 761.79(h) for cleanup and disposal of *PCB remediation waste* and *PCB bulk product waste*.

With respect to the verification sampling frequency, based on the results of the PCB sampling to-date and the proposed cleanup and disposal approach, EPA has determined that the sampling plan and verification sampling frequency are adequate to confirm that PCB cleanup standard has been met. EPA finds that the activities proposed by MPS will not create an unreasonable risk to public health or the environment when conducted in accordance with the Notification and this Approval. EPA may approve the sampling under § 761.61(c).

MPS may proceed with its cleanup in accordance with 40 CFR §§ 761.61(a) and (c); § 761.62; § 761.79(h); its Notification; and this Approval, subject to the conditions of Attachment 1.

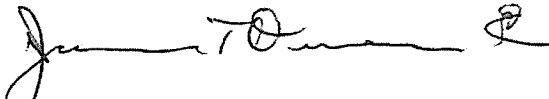

This Approval does not release MPS from any applicable requirements of federal, state or local law, including the requirements related to cleanup and disposal of PCBs or other contaminants under the CTDEEP regulations.

Correspondence and questions regarding this Approval should be directed to:

Kimberly N. Tisa, PCB Coordinator (OSRR07-2)
United States Environmental Protection Agency
5 Post Office Square, Suite 100
Boston, Massachusetts 02109-3912
Telephone: (617) 918-1527
Facsimile: (617) 918-0527

EPA shall not consider this project complete until it has received all submittals required under this Approval. Please be aware that upon EPA receipt and review of the submittals, EPA may request any additional information necessary to establish that the work has been completed in accordance with 40 CFR Part 761, the Notification, and this Approval.

Sincerely,

Attachment 1- Approval Conditions

ATTACHMENT 1

**PCB CLEANUP AND DISPOSAL APPROVAL CONDITIONS
ORVILLE H. PLATT HIGH SCHOOL ("the Site")
220 COE AVENUE, MERIDEN, CONNECTICUT**

GENERAL CONDITIONS

1. This Approval is granted under the authority of Section 6(e) of the Toxic Substances Control Act (TSCA), 15 U.S.C. § 2605(e), and the PCB regulations at 40 CFR Part 761, and applies solely to the *PCB bulk product waste* and the *PCB remediation waste* located at the Site and identified in the Notification.
2. The Meriden Public Schools (MPS) shall conduct on-site activities in accordance with the conditions of this Approval and with the Notification.
3. In the event that the cleanup plan described in the Notification differs from the conditions specified in this Approval, the conditions of this Approval shall govern.
4. The terms and abbreviations used herein shall have the meanings as defined in 40 CFR § 761.3 unless otherwise defined within this Approval.
5. MPS must comply with all applicable federal, state and local regulations in the storage, handling, and disposal of all PCB wastes, including PCBs, PCB Items and decontamination wastes generated under this Approval. In the event of a new spill during response actions, MPS shall contact EPA within 24 hours for direction on PCB cleanup and sampling requirements.
6. MPS is responsible for the actions of all officers, employees, agents, contractors, subcontractors, and others who are involved in activities conducted under this Approval. If at any time MPS has or receives information indicating that MPS or any other person has failed, or may have failed, to comply with any provision of this Approval, it must report the information to EPA in writing within 24 hours of having or receiving the information.
7. This Approval does not constitute a determination by EPA that the transporters or disposal facilities selected by MPS are authorized to conduct the activities set forth in the Notification. MPS is responsible for ensuring that its selected transporters and disposal facilities are authorized to conduct these activities in accordance with all applicable federal, state and local statutes and regulations.
8. This Approval does not: 1) waive or compromise EPA's enforcement and regulatory authority; 2) release MPS from compliance with any applicable requirements of federal, state or local law; or 3) release MPS from liability for, or otherwise resolve any violations of federal, state or local law.

9. Failure to comply with the Approval conditions specified herein shall constitute a violation of the requirement in § 761.50(a) to store or dispose of PCB waste in accordance with 40 CFR Part 761 Subpart D.

NOTIFICATION AND CERTIFICATION CONDITIONS

10. This Approval may be revoked if the EPA does not receive written notification from MPS of its acceptance of the conditions of this Approval within 10 business days of receipt.
11. MPS shall submit the following information for EPA review and/or approval:
 - a. a certification signed by its selected contractor, stating that the contractor(s) has read and understands the Notification, and agrees to abide by the conditions specified in this Approval;
 - b. a contractor work plan, prepared and submitted by the selected demolition or abatement contractor(s) describing the containment and air monitoring that will be employed during abatement activities. This work plan should also include information on how and where wastes will be stored, and disposed of, and on how field equipment will be decontaminated; and,
 - c. a certification signed by the selected analytical laboratory, stating that the laboratory has read and understands the extraction and analytical methods and quality assurance requirements specified in the Notification and in this Approval.

REMEDIAL AND DISPOSAL CONDITIONS

12. To the maximum extent practical, engineering controls, such as barriers, and removal techniques, such as the use of HEPA ventilated tools, shall be utilized during removal processes. In addition, to the maximum extent possible, disposable equipment and materials, including PPE, will be used to reduce the amount of decontamination necessary.
13. PCB-contaminated materials shall be decontaminated and confirmatory sampling and analysis shall be conducted as described below:
 - a. All visible residues of *PCB bulk product waste* (i.e., exterior/interior window caulk, slate window sill caulk, and 1968 gym floor including shellac, mastic, and vapor barrier) shall be removed as described in the Notification.
 - b. The decontamination standard for building *porous surfaces* (i.e., concrete block and brick) shall be less than or equal to (\leq) 1 ppm.

- i) Sampling for *porous surfaces* shall be performed on a bulk basis (i.e., mg/kg) and reported on a dry weight analysis. Sampling for *porous surfaces* shall be conducted in accordance with the EPA Region 1 *Standard Operating Procedure for Sampling Porous Surfaces for Polychlorinated Biphenyls (PCBs) Revision 4, May 5, 2011*, at a maximum depth interval of 0.5 inches.
 - ii) Verification samples collected from *porous surfaces* (i.e., window openings, interior corridor expansion joints, and the 1968 gymnasium concrete floor) shall be collected at the following frequency:
 - (1) Window openings- 1 sample every 10 linear feet (lf) for the for a total of 223 samples
 - (2) Interior corridor expansion joints- 1 sample every 10 linear feet (lf) for the for a total of 4 samples
 - (3) 1968 gymnasium concrete floor- In accordance with the provisions of 40 CFR 761 Subpart O
 - iii) Chemical extraction for PCBs shall be conducted using Methods 3500B/3540C of SW-846 for solid matrices and Method 3500B/3510C of SW-846 for aqueous matrices; and, chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another extraction or analytical method(s) is validated according to Subpart Q.
- c. The decontamination standard for building *non-porous surfaces* (i.e., steel lintels and exhaust vents that will remain) shall be less than or equal to (\leq) 1 $\mu\text{g}/100\text{ cm}^2$.
- i) Sampling of *non-porous surfaces* shall be performed on a surface area basis by the standard wipe test as specified in 40 CFR § 761.123 (i.e., $\mu\text{g}/100\text{ cm}^2$) and in accordance with the frequency requirements at Subpart P, as described in the Notification.
 - ii) Chemical extraction for PCBs shall be conducted using Methods 3500B/3540C of SW-846 for solid matrices and Method 3500B/3510C of SW-846 for aqueous matrices; and, chemical analysis for PCBs shall be conducted using Method 8082 of SW-846, unless another extraction or analytical method(s) is validated according to Subpart Q.
14. All PCB waste (regardless of concentration) generated as a result of the activities described in the Notification, excluding any decontaminated materials, shall be marked in accordance with § 761.40; stored in a manner prescribed in § 761.65; and, disposed of in accordance with 40 CFR § 761.61(a)(5) or § 761.62, unless otherwise specified below:

- a. Decontamination wastes and residues shall be disposed of in accordance with 40 CFR § 761.79(g).
- b. Moveable equipment, tools, and sampling equipment shall be decontaminated in accordance with either 40 CFR § 761.79(b)(3)(i)(A), § 761.79(b)(3)(ii)(A), or § 761.79(c)(2).
- c. PCB-contaminated water generated during decontamination shall be decontaminated in accordance with 40 CFR § 761.79(b)(1) or disposed of under § 761.60.

INSPECTION, MODIFICATION AND REVOCATION CONDITIONS

15. MPS shall allow any authorized representative of the Administrator of the EPA to inspect the Site and to inspect records and take samples as may be necessary to determine compliance with the PCB regulations and this Approval. Any refusal by MPS to allow such an inspection (as authorized by Section 11 of TSCA) shall be grounds for revocation of this Approval.
16. Any proposed modification(s) in the plan, specifications, or information in the Notification must be submitted to EPA no less than 14 calendar days prior to the proposed implementation of the change. Such proposed modifications will be subject to the procedures of 40 CFR § 761.61(a)(3)(ii).
17. Any departure from the conditions of this Approval without prior, written authorization from the EPA may result in the revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.
18. Any misrepresentation or omission of any material fact in the Notification or in any records or reports may result in the EPA's revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.

RECORDKEEPING AND REPORTING CONDITIONS

19. MPS shall prepare and maintain all records and documents required by 40 CFR Part 761, including but not limited to the records required under Subparts J and K. A written record of the decontamination and the analytical sampling shall be established and maintained by MPS in one centralized location, until such time as EPA approves in writing a request for an alternative disposition of such records. All records shall be made available for inspection to authorized representatives of EPA.

20. MPS shall submit a final report in electronic and hard copy, to the EPA within 60 days of completion of the activities authorized under this Approval. At a minimum, this final report shall include: a short narrative of the project activities with photographic documentation; characterization and confirmation sampling analytical results; copies of the accompanying analytical chains of custody; field and laboratory quality control/quality assurance checks; an estimate of the quantity of PCB waste disposed of; copies of manifests and bills of lading; and, copies of certificates of disposal or similar certifications issued by the disposer.
21. Required submittals shall be mailed to:
- Kimberly N. Tisa, PCB Coordinator (OSRR07-2)
United States Environmental Protection Agency
5 Post Office Square, Suite 100
Boston, Massachusetts 02109-3912
Telephone: (617) 918-1527
Facsimile: (617) 918-0527
22. No record, report or communication required under this Approval shall qualify as a self-audit or voluntary disclosure under EPA audit, self-disclosure or penalty policies.

**RE: Orville H. Platt High School, Meriden, Connecticut
PCB Cleanup and Disposal Approval**

Dear Ms. Tisa:

We have received and reviewed the PCB Cleanup and Disposal Approval letter dated March 18, 2013 for the PCB Self-Implementing On-Site Cleanup and Disposal Plan prepared by Fuss & O'Neill EnviroScience, LLC with regard to the removal of PCB contaminants for the school building.

We acknowledge and accept the conditions of the approval letter and hope to move forward with this project. Currently, all work is scheduled to begin while school is out on summer vacation in 2013, 2014, 2015, and 2016.

We have attached the required certification for the laboratories, Phoenix Environmental Laboratories, Inc. and Con-Test Analytical Laboratory. The abatement contractor will be determined once the project has gone out to bid and a contractor is chosen. The contractor who is awarded the project will sign off on the SIDP and submit the required contractor work plan.

We will forward the contractor work plan prepared for the work when the abatement contractor is chosen and provide the plan prior to June 2013.

Thank you for your attention to this matter. If you have any questions with regard to the plan, please contact Carlos Texidor (ctexidor@fando.com) or (860) 510-9365.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael Grove", with a stylized flourish at the end.

1.0 SUMMARY

This work plan is submitted for the removal of PCB caulking on exterior and interior window caulk, associated with exterior windows, window sill caulking, expansion joint caulking and roof vent caulking at the Orville H Platt High School 1956 and 1968 Additions located at 220 Coe Street in Meriden, CT. Yankee Environmental Services, LLC (YANKEE) will do the hazardous materials abatement work on-site for PCB caulking and impacted porous materials.

2.0 REGULATIONS, PERMITS, AND QUALIFICATIONS

YANKEE shall obtain all permits necessary to execute work conducted at the Orville Platt High School 1956 and 1968 Additions. Yankee shall adhere to all applicable federal, state, and local rules and regulations including, but not limited to, those from the EPA, the Connecticut Department of Environmental Protection, the U.S. Occupational Safety and Health Administration (OSHA), and the Meriden Fire Department.

YANKEE shall conform to all stipulations and permits identified in the contract bid documents, including any conditions set forth in the EPA approval letter dated March 18, 2013. Where a conflict arises between regulations, YANKEE shall adhere to the most stringent regulation. YANKEE shall also confer with NASDI and Fuss & O'Neill EnviroScience to resolve any conflict between the project plans and the remediation procedures.

2.1 STANDARD OPERATING PROCEDURES

YANKEE has prepared a written work plan and health and safety plan for the work performed at the Orville Platt High School 1956 and 1968 Additions. The plan does ensure maximum protection of workers and visitors from exposure and prevents the release of PCBs or PCB-laden dust into the environment. A Health & Safety Plan was provided with our original submittal.

A Pre-Task Plan outlining work, hazards and controls will be issued for each task as they become available. The procedures include, but are not limited to the following:

- Engineering controls and work practices to minimize airborne contamination into the work area and to prevent the spread of such contamination outside the work area. These controls and practices instituted during abatement activities must keep workers' exposures to PCBs below the permissible exposure limit and ensure no release of PCBs from the work area.
- Specifications regarding containment processes to prevent the release of abatement debris from the work area.
- Specifications for sufficient and proper protective clothing and respiratory protection equipment for entrance into the exclusion zone, as may be required by OSHA regulations.
- Specifications for safe work practices in the workplace and exclusion of eating, drinking, smoking, or in any way breaking the respiratory protection, if respirators are required.
- Removal methods that minimize the amount of airborne dust generated from abatement activities.
- Specifications regarding end of work shift cleaning procedures.
- Specifications regarding the handling, storage, transport, and disposal of all appropriately classified PCB waste in a manner that minimizes exposure and that complies with federal, state, and local regulations regarding PCBs.
- Specifications identifying disposal sites for PCB waste.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

- Specifications regarding possible contingency plans pertaining to accidental spills and/or contamination in the work area or outside the work area.
- Mandatory and proper use of decontamination facilities when exiting the work area.
- Directions regarding the cleaning of work areas following abatement procedures.
- Supervision of work by a competent person.

In addition, the specific procedures outlined in the Section 3.3 shall be followed.

2.2 TRAINING AND CERTIFICATION

All personnel working with the containment zone at the Orville Platt High School 1956 and 1968 Additions will have all the required training, medical examinations, and respirator fit testing as specified by OSHA. YANKEE will have a competent manager at the job site at all times overseeing the work. Site-specific hazards and hazards associated with the handling and disposal of PCB products will be effectively communicated to the staff to minimize potential exposures. In addition, YANKEE will provide proper training and equipment for all safety-related issues. Appendix A contains copies of certifications.

3.0 SCOPE AND SCHEDULE

3.1 SCOPE

The scope of work for the project addresses PCB-containing caulking and porous materials impacted by the various PCB-containing caulking. The caulking is located throughout the Orville H. Platt High School 1956 and 1968 Additions on the exterior windows, doors and expansion

**Yankee Environmental Services, LLC**

joints as well as metal window frames, porous brick and concrete. Interior 1968 gym floor including shellac, mastic and vapor barrier

All caulking materials and gym flooring materials with concentrations greater than or equal to 50 ppm will be segregated for disposal at EQ Wayne, MI as PCB Bulk Product Waste. PCB caulking & glazing on window assembly with concentrations ≥ 50 ppm that also contain asbestos shall be removed as asbestos containing materials. This material will be profiled and sent to EQ in Michigan, which is licensed to accept these materials.

Building materials (brick, metal and concrete) impacted by PCBs with concentrations < 50 ppm will be disposed at Turnkey, NH landfill as remediation waste. All precautions and controls will be in-place regardless of level of PCB's.

Table 1
Summary of Work

Material Description	Location(s)	Estimated Amounts	PCB levels	Disposal Facility
Exterior& Interior Window Caulking	Throughout 1956 & 1968 Addition	410 Each	≥ 50 ppm	EQ NE Wayne, MI (TSCA or RCRA Approved landfill)
Shellac Varnish Floor & associated black mastic and Black Vapor barrier	1968 Exercise Gymnasium	1000 Square feet	≥ 50 PPM	EQ NE Wayne, MI (TSCA or RCRA Approved landfill)
Interior Window Sill Caulking/Slate Sill	Throughout 1956 & 1968 Addition	410 Each	≥ 50 PPM	EQ NE Wayne, MI (TSCA or RCRA Approved landfill)
Interior Expansion Joint & CMU	Throughout 1956/1968 building	40 LF	< 50 PPM	Turnkey

Non- Porous Window assemblies including PCB Containing Glazing.	Throughout 1956 & 1968 Addition	410 Each	≥50 PPM	EQ NE Wayne, MI (TSCA or RCRA Approved landfill)
				Turnkey
Roof Vent Caulking	Throughout		<50 PPM	

3.2 WORK SEQUENCE

The work sequence consists of the following general elements and will proceed phase by phase:

- Isolate all work areas with containments and proper engineering controls and protection.
- Remove all PCB containing materials,
- Package in bags to be disposed of with ACM/PCB Bulk Product Waste or Bulk PCB Remediation waste,
- Set-up dust control measures for hand scraping of residual caulking (i.e. HEPA vacuums)
- Waste Disposal
- Visual inspection of work

Yankee will supply all labor, materials, and equipment necessary to complete the scope of work detailed in this document in a professional manner.

3.3 SPECIFIC WORK PLAN PROCEDURES

Prior to beginning the task of caulking removal, YANKEE will create appropriate containments and decontamination zones in accordance with OSHA guidelines. The area will be contained utilizing 6-Mil polyethylene sheeting taped off and proper signage will be installed to keep other workers/visitors out of the work areas. HEPA air filtration device will be installed vented to the

outside of the building. A pop-up decontamination unit will be erected and maintained to perform the work.

All work will be completed by using power tools and hand tools. Flooring work will be removed using mechanical and manual methods. All material will be misted with a Hudson sprayer during the removal, HEPA vacuum during removal work. Prior to start of the removal of the Expansion Joint, pre-identified areas with adjacent surfaces contaminated will be marked out in accordance with the Self-Implementation Plan (SIP) 16 inches vertical.

This shall allow for workers to know where the demarcation of the waste stream exists. Qualified & trained workers shall remove the pre-identified areas of concrete masonry unit (CMU) with PCB concentrations inside the <50 ppm cut line in a manner to segregate the waste stream from clean material.

WINDOW & SILL CAULKING

A full containment will be erected outside the windows. A critical barrier will be placed inside the building at the window opening. Floor poly shall be laid under the windows to prevent contamination of the ground. At the ground level at containment entrance, Yankee will provide a two stage decontamination facility for the workers to remove protective clothing. All protective clothing will be disposed of as PCB remediation waste when workers leave the work area.

The caulking materials & adjacent surfaces will be sufficiently wetted (Hudson Sprayers) to minimize any release of material, but not excessively to cause a liquid waste stream; then the window will be pulled and caulking will be removed with caulking cutters. In the process of performing the removal with caulking cutters and scrapers, a HEPA vacuum with hose will be used for emissions control at the point of the work operation and all material shall be disposed of as Bulk Product Waste. Once the materials with concentrations of PCBs greater than or equal to

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

50 ppm PCB are removed and placed in dumpsters, we will request a visual inspection by Fuss & O'Neil. These materials shall be placed in bags (6-mil) and containerized, stored in designated waste disposal receptacle. Yankee will follow requirements outlined in the project specifications and EPA Approved PCB SIP.

All waste products including rags, poly sheeting, filter bags, decon debris and enclosures will be handled as PCB-contaminated waste and disposed of at (Waste Management of NH – Turnkey). All equipment utilized throughout the duration of this project will be decontaminated in accordance with the project specification and application TSCA regulations.

SHELLAC/ MASTIC & VAPOR BARRIER

A full containment equipped with a HEPA air filtration device will be erected within the gymnasium. Yankee will provide a three stage decontamination facility for the workers to remove protective clothing. All protective clothing will be disposed of as PCB remediation waste when workers leave the work area.

The PCB containing materials (with exception of shellac) are also ACM. Yankee will first remove all the wood flooring that is PCB containing with a combination of manual and mechanical methods. Once all flooring has been removed, Yankee will employ shrouded equipment (scarifier/grinders) to remove associated ACM/PCB contaminated mastic and vapor barrier from the concrete substrate. Airless sprayer will be used to wet the material to minimize any release of material, but not excessively to cause a liquid waste stream. All materials will be packaged. Once the materials with concentrations of PCBs greater than or equal to 50 ppm PCB are removed and placed in dumpsters, we will request a visual inspection by Fuss & O'Neill EnviroScience. Yankee will follow requirements outlined in the project specifications and EPA Approved PCB SIP Bated March 18, 2013.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

All waste products including rags, poly sheeting, filter bags, decon debris and enclosures will be handled as PCB-contaminated waste and disposed of at (Waste Management of NH – Turnkey). All equipment utilized throughout the duration of this project will be decontaminated in accordance with the project specification and application TSCA regulations.

EXPANSION JOINT

Prior to start of work, pre-identified areas with adjacent surfaces contaminated will be marked out in accordance with the Self-Implementation Plan (SIP) 16 inches vertical on either side of the expansion joint. A containment equipped with a HEPA air filtration device will be erected on the first floor where the expansion joint is located. Yankee will install a three stage decontamination facility for the workers to remove protective clothing. All protective clothing will be disposed of as PCB remediation waste when workers leave the work area.

The PCB containing expansion joint will be wetted and removed using manual and mechanical methods. Yankee will cut one course of CMU from either side of the expansion joint. The joint will be removed in conjunction with the CMU. All waste will be containerized and placed in a lined dumpster and disposed of as Bulk product Waste. Airless sprayer will be used to wet the material to minimize any release of material, but not excessively to cause a liquid waste stream. Yankee will request a visual inspection by Fuss & O'Neill EnviroScience. All work will be completed in as per specifications and EPA Approved PCB SIP.

EXHAUST VENT CAULKING

A mini containment equipped with a HEPA air filtration device will be erected on the roof where the exhaust vents are located. Yankee will install a two stage decontamination facility for the workers to remove protective clothing. All protective clothing will be disposed of as PCB remediation waste when workers leave the work area.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

The PCB containing vent caulk will be wetted using a Hudson sprayer and removed using manual and mechanical methods. All waste will be packaged and disposed of as PCB Remediation Waste. Yankee will request a visual inspection by Fuss & O'Neill EnviroScience. All work will be completed in as per specifications and EPA Approved PCB SIP dated March 18, 2013.

3.4 SCHEDULE

The PCB removal work is anticipated to take place during daytime hours beginning once the plan is approved. Project is phased and is anticipated that the work will take several years to complete.

4.0 UTILITIES

All utilities in the active work area will be verified as cut and capped before remediation starts.

4.1 WATER SYSTEMS

Yankee will use a standard water spigot fed from the building. In areas water is not proximal to the work areas, work shall be a Hudson Sprayer.

4.2 ELECTRICAL SYSTEMS

Yankee will provide a sub-panel that will be tied into the existing buildings main power supply.

5.0 SITE PREPARATIONS

5.1 WASTE CONTAINERS

YANKEE shall obtain and locate the approved PCB waste containers on-site. YANKEE will coordinate the location of the PCB waste containers with NASDI & O& G and the Construction Manager. The PCB waste containers shall be clearly marked as such to avoid confusion with ordinary waste containers. Please see marking requirements in Appendix B that outlines requirements.

6.0 MATERIAL STORAGE AND HANDLING PROCEDURES

6.1 PCB BULK PRODUCT WASTE MATERIAL – EQ NE Wayne, MI/ Minerva, OH

PCB bulk product waste shall be handled in a manner to avoid the breakdown of these materials into fine dust or powders. Caulking cutters will be removed material in a manner to reduce breaking down product.

Once removed; all PCB waste materials shall be containerized according to EPA regulations. Containers will then be placed in lined dumpsters for disposal. Any PCB waste and PCB-containing items shall be stored for disposal in accordance with 40 CFR 761.65. Containers shall be clearly marked as PCB-containing waste materials as required in 40 CFR 761.40 and 40 CFR 761.45 as shown in Appendix B.

Dumpsters containing PCB materials with concentrations greater than or equal to 50 ppm will be marked with designations indicating that the PCB materials are contained in the dumpsters, as stated in 40 CFR 761.65(c)(1). All dumpsters and drums of PCB waste will be non-liquid materials. The bags containing greater than or equal to 50 ppm PCB waste must be within the dumpsters and secured at the end of the day.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

Any dried and brittle PCB bulk product wastes require additional care to prevent the inadvertent release of PCB dust or powder into the environment.

6.2 BULK PCB REMEDIATION WASTE- WASTE MANAGEMENT OF NH TURNKEY

PCB decontamination materials from the personnel protective equipment used by workers during decontamination and removal activities shall be disposed of as remediation waste material at a TSCA/RCRA Title C landfill (Waste Management of NH - Turnkey). These materials will be placed into bags then directly into lined containers for disposal.

7.0 DISPOSAL

7.1 DISPOSAL FACILITIES

PCB REMEDIATION WASTE

- 7.1.1 Waste Management of NH Turnkey Facility
97 Rochester Neck Road
Rochester, NH 03063
(800) 963-4776

BULK PRODUCT WASTE

- 7.1.2 EQ Northeast Wayne Disposal Facility
49350 N. 1-94 Service Drive
Belleville, MI 48111
EPA ID # MID 048 090 633
(800) 592-5489

PCB REMEDIATION WASTE >50ppm

- 7.1.3 EQ Northeast Wayne Disposal Facility
49350 N. 1-94 Service Drive
Belleville, MI 48111
EPA ID # MID 048 090 633
(800) 592-5489

Disposal of all waste shall be in accordance with applicable state and federal regulations and sent to a licensed facility that will receive and retain PCB bulk product waste and PCB remediation waste, in accordance with EPA regulations under 40 CFR 761.61 and 40 CFR 761.62. All of the waste shall be treated as TSCA waste – bulk remediation waste shall be sent to (Waste Management of NH - Turnkey) and bulk product waste shall be sent to a TSCA/RCRA Title C landfill (EQ).

All PCB remediation waste removed from the site will be kept separate from other ordinary construction waste streams that the contractor may generate. Copies of all bills of lading, waste shipment records, certificates of disposal, and any other documentation will be provided to NASDI and O&G as proof of proper disposal of waste.

PCB remediation wastes will be stored according to applicable EPA TSCA regulations. YANKEE shall ensure compliance with storage and marking requirements described in 40 CFR 761.40, 40 CFR 761.45 and 40 CFR 761.65. The contractor shall also ensure that no visible emissions of dust will occur during the disposal of PCB bulk product and PCB remediation wastes into appropriate disposal containers.

The PCB remediation waste will be disposed of in accordance with 40 CFR 761.61 at the approved landfill for such disposal. YANKEE shall submit the appropriate landfill documentation to verify that it is capable of accepting PCB waste in accordance with these requirements, once a waste profile is generated by the landfill.

No TCLP analysis will be required prior to disposal for PCB Bulk Product Wastes at the proposed landfill. The landfill, EQ, MI does not require TCLP testing for PCB's in the waste profile.

Yankee Environmental Services, LLC

Exterior caulk, Slate window sill caulk, gym mastics & vapor barrier that contains asbestos greater than 1% and also contains PCB's greater than 50 ppm as well as all Bulk Product waste also containing asbestos material found in the building. These materials will be profiled and sent to Minerva in Ohio.

8.0 DECONTAMINATION AND REMOVAL PROCEDURES

YANKEE will obtain proper permits and conduct work in compliance with all applicable regulations, including the TSCA, the RCRA, and any other applicable federal, state, and local laws.

Steel lintels and metal vents that will remain after the windows and caulking have been removed, YES will decontaminate the lintels and vents using a controlled double wash and rinse method using Capsur cleaning Solvent in such a manner as to ensure no liquid waste is generated (See Appendix D). All clearance wipe samples are by other under a separate contract. If additional re-cleaning is deemed necessary due to wipe sampling result above acceptable limits, Yankee will respectfully request additional compensation.

8.1 DECONTAMINATION OF NON-POROUS SURFACES & WORKERS

Yankee employees performing the removal of PCB containing expansion joint caulking and window caulking will use the two stage decontamination facility located at the entrance to the work area to remove contaminated PPE and to wash any exposed skin areas prior to leaving the regulated areas.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

All packaged PCB waste and non-porous equipment in the work area will be decontaminated to the level of no visible dust or debris in the two stage waste load out facility prior to leaving the work area.

All tools and equipment that come into direct contact with PCB Bulk Product Waste and/or PCB Remediation Waste will be decontaminated in accordance with 40CFR761.79(c)(2) by swabbing the potentially contaminated surfaces with Orange Off, an effective cleaning product, and wipes prior to leaving the work area. Appendix C contains info on product. The wipes shall be disposed of PCB Remediation Waste.

All packaged PCB waste will be decontaminated to the level of no visible dust or debris prior to leaving the work area. In accordance with the project specifications, rags and a water/detergent mixture will be used to perform routine decontamination during work inside the regulated area.

9.0 HEALTH AND SAFETY

9.1 YANKEE HEALTH AND SAFETY PLAN

The written health and safety plan that details engineering controls, practices and procedures, protective equipment, and training that will be used to control and minimize exposures has been previously submitted. This plan outlines PPE protection requirements for dealing with hazardous materials.

9.2 OSHA REGULATIONS

All applicable federal and state OSHA standards and regulations to ensure worker safety will be in effect during the abatement process. The following programs must be addressed in the contractor's health and safety plan. This is not a comprehensive list of the required programs,

and the contractor is responsible for determining which programs apply and how best to implement the required programs.

- Fall Protection
- Personal Protective Equipment
- Lockout/Tagout
- Confined Spaces
- Machine Safety
- Ladder/Scaffolding Safety
- Electrical Safety
- Housekeeping (Slips, Trips, Falls)
- Injury Reporting
- First Aid
- HAZWOPER/HAZMAT
- Asbestos Abatement

9.3 PUBLIC SAFETY

YANKEE will ensure public safety during the abatement work as identified within this plan. YANKEE has implemented containment measures designed to protect workers, occupants, and the environment from the release of PCB-containing materials.

Access to work areas will need to be limited to ensure that only workers properly trained will be within the Site. Proper hygiene and decontamination procedures must be followed to limit the potential for transferring PCB remediation waste outside the work area.

Yankee Environmental Services, LLC

Asbestos Removal, Lead Paint, Mold, Demolition, PCBs

29 Esquire Road • Billerica, MA 01862 • (978) 663-6506 • Fax (978) 663-6493 • www.yankeellc.com

YANKEE will conduct visual assessments to verify the effectiveness of the controls. If observations indicate that additional containment or engineering controls are required, YANKEE will be responsible for making the necessary adjustments to engineering controls and work practices to minimize fugitive emissions, as determined by O&G & Fuss & O'Neill. Additionally, the Owner's consultant will be performing perimeter air monitoring to document and determine the effectiveness of YANKEE controls. Specific detail for perimeter monitoring is outlined in the Owner's Site Implementation Plan (SIP). YANKEE will perform its own personal monitoring for its workforce in accordance with OSHA Regulations.

In addition, if there is evidence of PCB bulk product waste or remediation waste outside of the immediate work area (as determined by visual inspection), YANKEE will clean up the debris in accordance with the procedures and to the standards specified in specification and PCB SIP, and shall modify controls and procedures to prevent a reoccurrence, at no cost to Owner.

10.0 FINAL APPROVAL AND ACCEPTANCE

Final approval of the remedial work will be given when the following conditions are met:

- The work has been completed in a professionally competent manner, as demonstrated by successful visual inspections described in PCB SIP.
- The Site has been successfully closed out.
- The Owner will receive a completed and accurate waste manifest for every PCB waste container removed from the site's waste storage location.
- The work will not be considered complete until O&G provides final approval.

MATERIAL SAFETY DATA SHEET

COMPLIES WITH OSHA'S HAZARD COMMUNICATION STANDARD (29 CFR 1910.1200)

SECTION I - PRODUCT IDENTIFICATION

Product Name: ORANGE OFF Natural Cleaner Degreaser & Deodorant
Product Number: 418
Product Type: AEROSOL
Supplier's Name: Southwest Specialty
Supplier's Address: P.O. Box 14194, Odessa, TX 79768
D.O.T. Hazard Class: CONSUMER COMMODITY - ORM D

Formula: Proprietary
Date Prepared: 12/01/07
Emergency Phone: (800) 535-5053
Information Phone: (432) 363-3797

HMS Rating (Based on Aerosol Conc.):
0-Minimal 1- Slight 2- Moderate
3- Serious 4- Extreme
HEALTH: 1 FIRE: 2 REACTIVITY: 0
Personal Protection: B

SECTION II - INGREDIENTS

CHEMICAL NAME	CAS #	%WT	313/Chem	Skin	Carcinogen	PEL	TWA/TLV
Citrus Terpene	5989-27-5	60 - 90	NO	NO	NO	N/E	N/E
Nonylphenol Ethoxylate	127007-87-0	10 - 20	NO	NO	NO	N/E	N/E
Carbon Dioxide Propellant	124-38-9	1 - 5	NO	NO	NO	5000 ppm	5000 ppm

SECTION III - PHYSICAL DATA

Data Below Based On Aerosol Concentrate Only:

Boiling Point: ~ 323° F

pH: N/A

Solubility in Water: Emulsifies

Appearance/Odor: Clear Orange Liquid, Citrus Fragrance

Data Below Based On Total Contents:

Vapor Pressure of can (pkg @72°F): 78

Total VOC %: 77.6%

Vapor Density (Air=1): >1

Specific Gravity (H₂O=1)@75°F: 0.874

SECTION IV - FIRE AND EXPLOSION DATA

Flash Point (of Concentrate Only): 122°F (T.O.C)

Extinguishing Media: Foam, CO₂, Dry Media

Special Fire Fighting Procedures: Wear self-contained breathing apparatus and protective clothing. Cool fire exposed containers to prevent rupturing.

Unusual Fire and Explosion Hazards: Exposure to temperature above 120° F may cause bursting.

Flammability (as per USA Flame Projection Test): Extremely Flammable Spray

SECTION V - REACTIVITY DATA

Stability: Material Stable.

Incompatibility: Avoid contact with strong oxidizing agents.

Hazardous Decomposition Products: Carbon Dioxide, Carbon Monoxide

Hazardous Polymerization: Will not Occur.

SECTION VI - STORAGE AND HANDLING

KEEP OUT OF REACH OF CHILDREN.

For industrial and institutional use only.

Store in a cool, dry area away from heat or open flame.

Do not store at temperatures above 120° F.

NEPA Code 30B Rating: Level 3 Aerosol.

SECTION VII - HEALTH AND FIRST AID

PRIMARY ROUTES OF ENTRY & EFFECTS OF OVER EXPOSURE:

Eyes: May cause moderate to severe irritation.

Skin: Frequent or prolonged contact may cause irritation, drying and defatting of skin, and dermatitis. May aggravate existing skin conditions.

Inhalation: Inhalation of mist can cause irritation of nasal and respiratory passages. Frequent or prolonged exposure may cause irritation to the upper respiratory tract, coughing, dizziness, nausea and headache.

Ingestion: Harmful if swallowed. Can cause gastrointestinal irritation, nausea, vomiting and diarrhea. Aspiration of material into the lungs can cause lung injury.

FIRST AID PROCEDURES:

Eyes: Flush with large amounts of cool running water for at least 15 minutes while holding upper and lower lids open. If irritation persists get medical attention immediately.

Skin: Wash with soap and water. If irritation persists seek medical attention.

Inhalation: Remove to fresh air. Seek medical attention immediately. If breathing stops give artificial respiration.

Ingestion: Do not induce vomiting. Seek medical attention immediately.

SECTION VIII - SPECIAL PROTECTION DATA

Respiratory Protection: None needed for proper use in accordance with label directions.

Ventilation: Provide local exhaust to keep air concentration of ingredients listed in Section II below acceptable limits.

Protective Gloves: Use chemical resistant gloves if hand contact will be made.

Eye Protection: Always wear safety glasses or chemical proof goggles when working with chemicals.

SECTION IX - SPILL OR LEAK PROTECTION

STEPS TO BE TAKEN IN CASE OF SPILL OR LEAK: Allow propellant to evaporate. Maintain local exhaust and adequate ventilation. No smoking. Keep sparks, heat sources and open flame far away from spill or leak. Cover with absorbent material and sweep up. Wash area to prevent slipping. Dispose of soaked absorbent material in accordance with Federal, State and local laws.

WASTE DISPOSAL METHOD: Aerosol cans, when emptied and depressurized through normal use, pose no disposal hazard and should be recycled. Consult Federal, State and local authorities for approved procedures.

& REDNESS. SKIN: IRRITATION, REDNESS, BURNING, DRYING & CRACKING.
Medical Cond Aggravated by Exposure:LUNG DISORDERS (ASTHMA-LIKE
CONDITIONS)

===== First Aid Measures =====

First Aid:SKIN: WASH W/MILD SOAP & WATER. INHALATION: REMOVE TO FRESH
AIR. IF NOT BREATHING, GIVE ARTIFICIAL RESPIRATION. EYES: FLUSH
W/PLENTY OF WATER. REMOVE CONTACT LENSES. INGESTION: IF DROWSY OR
UNCONSCIOUS, PLACE ON THE LEFT SIDE W/THE HEAD DOWN. DON'T GIVE
ANYTHING BY MOUTH. IF CONSCIOUS & ALERT, INDUCE VOMITING BY GIVING
SYRUP OF IPECAC UNDER PHYSICIAN CARE. DON'T LEAVE UNATTENDED.
OBTAIN MED ATTN.

===== Fire Fighting Measures =====

Flash Point Method: COC
Flash Point: 145F
Lower Limits: 0.5%
Upper Limits:6%
Extinguishing Media:CO2, FOAM, DRY CHEMICAL
Fire Fighting Procedures:WEAR SELF-CONTAINED BREATHING APPARATUS.

===== Accidental Release Measures =====

Spill Release Procedures:CONTAIN SPILL. SOAK UP W/INERT ABSORBENT.
PLACE IN SUITABLE CONTAINERS FOR DISPOSAL. SPILL/LEAK PROCEDURES
APPLY TO CAPSUL, NOT OPERATING CONDITIONS IN WHICH IT IS USED,
WHICH WILL CONTAIN PCB'S. IN CASE OF SPILL DURING CLEANUP, FOLLOW
PCBCLEANUP.

===== Handling and Storage =====

Handling and Storage Precautions:KEEP CONTAINERS CLOSED WHEN NOT IN
USE. DON'T STORE IN CONTACT W/RUBBER OR PLASTIC. STORE AWAY FROM
HEAT, SPARKS, & OPEN FLAME.
Other Precautions:DON'T STORE OR MIX NEAR STRONG OXIDANTS.

===== Exposure Controls/Personal Protection =====

Respiratory Protection:USE A RESPIRATOR W/OV CARTRIDGES. A HEPA FILTER
MAY ALSO BE REQUIRED UNDER CERTAIN ENCLOSED APPLICATION CONDITIONS.
Ventilation:IF CURRENT VENTILATION IS NOT ADEQUATE, USE ADDITIONAL
VENTILATION OR EXHAUST SYSTEMS.
Protective Gloves:SUITABLE FOR HYDROCARBON USE
Eye Protection:RECOMMENDED
Other Protective Equipment:COVERALLS (SARANEX-COATED TYVEK IS
RECOMMENDED), NEOPRENE BOOTS & BOOT COVERS
Work Hygienic Practices:REMOVE/LAUNDER CONTAMINATED CLOTHING BEFORE

REUSE.

Supplemental Safety and Health

NOTE: HEALTH HAZARD DATA APPLIES TO CONTACT W/CAPSUR ITSELF, NOT THE OPERATING SOLUTIONS IN WHICH IT IS USED, WHICH TYPICALLY CONTAIN CONCENTRATED PCB'S. IN CASE OF CONTACT W/OPERATING SOLUTION, FOLLOW TREATMENT METHODS APPLICABLE FOR EXPOSURE TO SOLUTIONS OF THIS TYPE. U.S. PATENT NO. 4,792,413 & 4,844,745.

===== Physical/Chemical Properties =====

Boiling Pt:B.P. Text:>212F
Melt/Freeze Pt:M.P/F.P Text:<0C
Vapor Pres:NEGLIGIBLE
Vapor Density:4.8
Spec Gravity:0.965-0.985
pH:11
Evaporation Rate & Reference:(BU AC = 1): <1
Solubility in Water:MODERATE
Appearance and Odor:CLEAR AMBER LIQUID W/CHARACTERISTIC NAPHTHA ODOR
Percent Volatiles by Volume:60

===== Stability and Reactivity Data =====

Stability Indicator/Materials to Avoid:YES
RUBBER, PLASTIC, STRONG ACIDS, & STRONG OXIDIZING AGENTS
Stability Condition to Avoid:TEMPERATURES APPROACHING 145F, HEAT, SPARKS, & OPEN FLAME
Hazardous Decomposition Products:CO, CO2, NITROGEN & SULFUR

===== Disposal Considerations =====

Waste Disposal Methods:DISPOSE OF IN ACCORDANCE W/LOCAL, STATE, & FEDERAL REGULATIONS.

Appendix D

Analytical Reports: Bulk Verification Sampling Results and Locations

Friday, November 15, 2013

Attn: Ms Karron Redfield
Fuss & O'Neill, Inc.
146 Hartford Road
Manchester, CT 06040

Project ID: PLATT HIGH SCHOOL-MERIDEN
Sample ID#s: BF75334 - BF75345

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Phyllis Shiller".

Phyllis Shiller
Laboratory Director

Sampling Date(s): 11/12/2013

RCP Methods Used:

☐ 1311/1312 ☐ 6010 ☐ 7000 ☐ 7196 ☐ 7470/7471 ☐ 8081 ☐ EPH ☐ TO15
☒ 8082 ☐ 8151 ☐ 8260 ☐ 8270 ☐ ETPH ☐ 9010/9012 ☐ VPH

1.	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CT DEP method-specific Reasonable Confidence Protocol documents?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1a.	Were the method specified preservation and holding time requirements met?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
1b.	EPH and VPH methods only: Was the VPH or EPH method conducted without significant modifications (see section 11.3 of respective RCP methods)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA
2.	Were all samples received by the laboratory in a condition consistent with that described on the associated Chain-of-Custody document(s)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
3.	Were samples received at an appropriate temperature (< 6 Degrees C)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
4.	Were all QA/QC performance criteria specified in the Reasonable Confidence Protocol documents achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
5a.	Were reporting limits specified or referenced on the chain-of-custody?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5b.	Were these reporting limits met?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> NA
6.	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
7.	Are project-specific matrix spikes and laboratory duplicates included in the data set?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA

Note: For all questions to which the response was "No" (with the exception of question #5a, #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A or 1B is "No", the data package does not meet the requirements for "Reasonable Confidence".

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

PLHCP¹ WRITTEN STATEMENT for RESPIRATORS (EMPLOYER)**PHYSICIAN WILL COMPLETE THE FOLLOWING**

This report may contain confidential medical information and is intended for the designated employer contact only. The Americans with Disabilities Act (ADA) imposes very strict limitations on the use of information obtained during physical examination of qualified individuals with disabilities. All information must be collected and maintained on separate forms, in separate files, and must be treated as a confidential medical record, with the following exceptions:

- Supervisors and managers may be informed about necessary restrictions on the work or duties of an employee and necessary accommodations.
- First aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment.

Based upon my findings, I have determined that this individual (Check ☒ ALL that apply)☐ Employee must schedule a medical examination with Concentra Medical Centers (CT) prior to respirator approval and usage.☒ Class I - No Restrictions on Respirator Use☐ Class II - Some Specific Use Restrictions☐ Class III - Respirator Use is NOT PERMITTED☐ Further Testing / Evaluation is Required. ²☐ Fit Test Required☐ Fit Test Performed Satisfactorily☐ Fit Test Performed Unsatisfactorily☐ Fit Test NOT Performed at: Concentra Medical Centers (CT)☐ Special prescription eyewear needed to accommodate respirator☐ Special prescription eyewear needed to accommodate respirator☐ Facial hair needs to be shaved to assure tight seal on certain face masks.¹ Physician or other Licensed Healthcare Professional² Employee must seek further medical evaluation by a private physician who must submit a report to Concentra Medical Centers (CT) of his/her findings to(Check ☒ ALL that apply)☒ The above individual HAS been examined for respirator fitness in accordance with 29 CFR 1910.134. This limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.☐ The above individual HAS NOT been examined by me for respirator fitness. The employee's medical evaluation consisted of a review of OSHA's Medical Evaluation Questionnaire in Appendix C Part A Section 2. In accordance with 29 CFR 1910.134, this limited evaluation is specific to respirator use only. Employees would be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.☐ In accordance with specific OSHA requirements, I have informed the above named individual of the results of this evaluation and of any medical conditions resulting from exposures that may require further explanation or treatment. Where applicable, the above named individual has been informed of the increased risk of lung cancer attributable to the combined effect of smoking and asbestos, lead and/or other chemical exposure(s).Physician's Signature: Rhonda Gold033942/CT

Race: ASIAN BLACK HISPANIC INDIAN WHITE OTHER

The above individual was seen on 10/11/2013 in accordance with: 29 CFR 1926.1101.
40 CFR 763.12.

The following was performed:

- ☒ Completion and review of the standardized medical questionnaire and work history with special emphasis directed to the pulmonary, cardiovascular, and gastrointestinal systems per Appendix D in 1926.1101.
- ☐ Review of the employer's description of: this employee's duties as they relate to the employee's exposure, the employee's representative or anticipated exposure level, and personal protection equipment to be utilized by the employee.
- ☐ Review of information from previous medical examinations if available.
- ☒ A physical examination with emphasis upon the pulmonary, cardiovascular, and gastrointestinal systems.
- ☒ A pulmonary function test of forced vital capacity (FVC) and forced expiratory volume at one second (FEV 1) in accordance with NIOSH and ATS standards.
- ☐ A chest roentgenogram, posterior-anterior, 14x17 inches (or current film on file) with interpretation in accordance with 29 CFR 1926.1101. (M)(2)(ii)(C).
- ☐ NOTE: According to 29 CFR 1926.1101 (M)(2)(ii)(C), it is up to the discretion of the physician whether or not a chest X-ray is required.
- ☒ The employee was informed by the physician of the results of the exam and of any medical conditions that may result from asbestos exposure including the increased risk of lung cancer attributable to the combined effect of smoking and asbestos exposure.

Unless otherwise noted below, this evaluation indicates that there are no detected medical conditions that would place the employee at an increased risk of material health impairment from exposure to asbestos, and there are no recommended limitations on the employee concerning the use of personal protective equipment or respirator.

PLHCP¹ WRITTEN STATEMENT for RESPIRATORS (EMPLOYER)**PHYSICIAN WILL COMPLETE THE FOLLOWING**

This report may contain confidential medical information and is intended for the designated employer contact only. The Americans with Disabilities Act (ADA) imposes very strict limitations on the use of information obtained during physical examination of qualified individuals with disabilities. All information must be collected and maintained on separate forms, in separate files, and must be treated as a confidential medical record, with the following exceptions:

- Supervisors and managers may be informed about necessary restrictions on the work or duties of an employee and necessary accommodations.
- First aid and safety personnel may be informed, when appropriate, if the disability might require emergency treatment.

Based upon my findings, I have determined that this individual (Check ☒ ALL that apply)☐ Employee must schedule a medical examination with Concentra Medical Centers (CT) prior to respirator approval and usage.☒ Class I - No Restrictions on Respirator Use☐ Class II - Some Specific Use Restrictions☐ To be used for Emergency Response or Escape Only☐ Other: _____☐ Class III - Respirator Use is NOT PERMITTED☐ Further Testing / Evaluation is Required. ²☐ Fit Test Required☐ Fit Test Performed Satisfactorily☐ Fit Test Performed Unsatisfactorily☒ Fit Test NOT Performed at: Concentra Medical Centers (CT)☐ Special prescription eyewear needed to accommodate respirator☐ Special prescription eyewear needed to accommodate respirator☒ Facial hair needs to be shaved to assure tight seal on certain face masks.

Physician or other Licensed Healthcare Professional

² Employee must seek further medical evaluation by a private physician who must submit a report to Concentra Medical Centers (CT) of his/her findings to**(Check ☒ ALL that apply)**

☒ The above individual HAS been examined for respirator fitness in accordance with 29 CFR 1910.134. This limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.

☐ The above individual HAS NOT been examined by me for respirator fitness. The employee's medical evaluation consisted of a review of OSHA's Medical Evaluation Questionnaire in Appendix C Part A Section 2. In accordance with 29 CFR 1910.134, this limited evaluation is specific to respirator use only. Employees would be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.

☒ In accordance with specific OSHA requirements, I have informed the above named individual of the results of this evaluation and of any medical conditions resulting from exposures that may require further explanation or treatment. Where applicable, the above named individual has been informed of the increased risk of lung cancer attributable to the combined effect of smoking and asbestos, lead and/or other chemical exposure(s).

You were evaluated in this office of your medical status related to your physical capability to wear a respirator. (Check ☒ one that applies)

- ☒ There were no abnormal findings that would hamper your ability to perform your job duties while wearing a respirator.
☐ The abnormal findings listed below were not related to wearing a respirator but should be reported to your personal physician for further evaluation.

Based upon the results of this evaluation it is my opinion that you: (Check ☒ ALL that apply)

- ☒ ARE qualified to wear a respirator.
☐ Have the following restrictions concerning respirator usage: _____
☐ ARE NOT qualified to wear a respirator.
☐ Require further testing by your private physician who must submit a written report of his/her findings to Concentra Medical Centers (CT) so that a final decision on your ability to wear a respirator can be made.
☐ Must wear Special prescription eye-wear needed to accommodate respirator.
☐ Must use an Eye glass conversion kit.
☒ May need to shave Facial hair to assure tight seal on certain face masks.
☐ Need to stop smoking.

(Check ☒ ALL that apply)

- ☒ The above individual HAS been examined for respirator fitness in accordance with 29 CFR 1910.134. This limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.
☐ The above individual HAS NOT been examined by me for respirator fitness. The employee's medical evaluation consisted of a review of OSHA's Medical Evaluation Questionnaire in Appendix C Part A Section 2. In accordance with 29 CFR 1910.134, this limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.
☒ In accordance with specific OSHA requirements, I have informed the above named individual of the results of this evaluation and of any medical conditions resulting from exposures that may require further explanation or treatment. Where applicable, the above named individual has been informed of the increased risk of lung cancer attributable to the combined effect of smoking and asbestos, lead and/or other chemical exposure(s).

Respirators must be properly selected based on the containment and concentration levels to which the worker will be exposed. Failure to follow the use and fitting instruction and warnings for proper use contained on the respirator packaging and/or failure to wear the respirator during all times of exposure can reduce the respirator's effectiveness and result in sickness or death. Wearer must be trained in the proper care of any respirator. Refer to product literature and packaging for specific information regarding fit, use and/or limitations.

**FIT TEST AND RESPIRATOR TRAINING CHECK LIST**

PRUEBA DE AJUSTE DEL RESPIRADOR

The following is a checklist that must be completed for each employee to wear a negative pressure respirator. This form is required every year on all Asbestos or Lead job sites.

I CERTIFY THAT ON THE DATE STATED BELOW I WAS TESTED FOR THE RESPIRATOR TYPE AND MODEL LISTED BELOW. I WAS ALSO GIVEN TRAINING REGARDING THE PROPER USE OF THE RESPIRATOR AND THE MAINTENANCE PROCEDURES REQUIRED.

I FURTHER CERTIFY THAT I UNDERSTAND THE TRAINING PROVIDED TO ME AND KNOW THAT THE USE OF A RESPIRATOR UNDER CONDITIONS CONTRARY TO THOSE OUTLINED AS APPROPRIATE IN THE TRAINING AND TEST SESSION MAY NOT PROVIDE ADEQUATE PROTECTION.

PHYSICIAN ' S WRITTEN OPINION

TO Riyeth Say

FROM : HUNG TRONG DO, MD, 16 BRANCH ST, LOWELL , MA 01851

DATE: 08/24/2013

SUBJECT: PHYSICIAN'S WRITTEN OPINION

In accordance with the requirements of section (m)(4) (1) of the OSHA Asbestos Standard, 29 CFR 1926.110 the examining physician will provide the employer with a written opinion which shall contain the following

- 1 This is to certify ,that on this date 08/24/13 ,and in accordance with the OSHA Asbestos Standard, 29 CFR 1926.1101.(m)(1),(2),(3) and (4), I have examined this individual Riyeth Say with Social Security Number 552711191
- 2 Based on my finding ,I have determined this individual may (☒) may not () use a respiratory device while performing his/her required employment services
- 3 The results of my examination have not(☒) have () detected a medical condition which would place this individual at an increased risk of material health impairment from exposure to asbestos
- 4 In accordance with OSHA requirements, I have informed the above named individual of the results of his/her medical examination and of any medical condition that may result from his/her exposure to asbestos ;and
- 5 I have informed the above named individual of the health risks involved in smoking of the synergistic relationship between cigarette smoking and asbestos exposure in producing lung cancer

COMMENTS : FEV₁ 600^{ml} FVC 3.90 litres
Chest Xray ordered

The complete medical examination report on the above named individual will be forwarded to the employer pending final conclusion and interpretation of any additional medical data collected during the examination

RESPIRATOR TRAINING RECORD

Your signature on this Respirator Training Record will attest to your having received and understood the following respirator training information which both OSHA and YES require as a part of their Respiratory Protection Standard.

The required respirator training consists of the following:

- ☐ An explanation of the problems involved in misusing or inter-changing parts of the respirator.
- ☐ A discussion of why engineering controls could not prevent the use of respiratory protection.
- ☐ How and why this make and model respirator was chosen for this specific project.
- ☐ The limitations of this make and model respirator.
- ☐ How to put on this respirator and properly adjust the facepiece and tension straps.
- ☐ How to wear this respirator properly.
- ☐ What the essential points of the care and maintenance of this respirator are.
- ☐ How to recognize and handle emergencies which may occur while using this respirator.
- ☐ How to properly inspect, clean and disinfect this respirator.
- ☐ How to properly use an Air Purifying Respirator.
- ☐ When a Type-C supplied-air respirator is required.
- ☐ The purpose of the medical evaluation.
- ☐ How FEC conducts a proper respirator fit-test.
- ☐ That a Powered Air Purifying respirator (PAPR) is available to you upon request, as long as it meets the protection factor for the hazard involved.

You were evaluated in this office of your medical status related to your physical capability to wear a respirator. (Check ☒ one that applies)

- ☒ There were no abnormal findings that would hamper your ability to perform your job duties while wearing a respirator.
- ☐ The abnormal findings listed below were not related to wearing a respirator but should be reported to your personal physician for further evaluation.

Based upon the results of this evaluation it is my opinion that you: (Check ☒ ALL that apply)

- ☒ ARE qualified to wear a respirator.
- ☐ Have the following restrictions concerning respirator usage: _____
- ☐ ARE NOT qualified to wear a respirator.
- ☐ Require further testing by your private physician who must submit a written report of his/her findings to Concentra Medical Centers (CT) so that a final decision on your ability to wear a respirator can be made.
- ☐ Must wear Special prescription eye-wear needed to accommodate respirator.
- ☐ Must use an Eye glass conversion kit.
- ☐ May need to shave Facial hair to assure tight seal on certain face masks.
- ☐ Need to stop smoking.

(Check ☒ ALL that apply)

- ☒ The above individual HAS been examined for respirator fitness in accordance with 29 CFR 1910.134. This limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.
- ☐ The above individual HAS NOT been examined by me for respirator fitness. The employee's medical evaluation consisted of a review of OSHA's Medical Evaluation Questionnaire in Appendix C Part A Section 2. In accordance with 29 CFR 1910.134, this limited evaluation is specific to respirator use only. Employees should be instructed to report any difficulties in using respirators or change of any physical status to their supervisor or physician. This evaluation included the Respiratory Questionnaire outlined in 29 CFR 1910.134.
- ☒ In accordance with specific OSHA requirements, I have informed the above named individual of the results of this evaluation and of any medical conditions resulting from exposures that may require further explanation or treatment. Where applicable, the above named individual has been informed of the increased risk of lung cancer attributable to the combined effect of smoking and asbestos, lead and/or other chemical exposure(s).

Respirators must be properly selected based on the containment and concentration levels to which the worker will be exposed. Failure to follow the use and fitting instruction and warnings for proper use contained on the respirator packaging and/or failure to wear the respirator during all times of exposure can reduce the respirator's effectiveness and result in sickness or death. Wearer must be trained in the proper care of any respirator. Refer to product literature and packaging for specific information regarding fit, use and/or limitations.

Race: ASIAN BLACK HISPANIC INDIAN WHITE OTHER

The above individual was seen on 10/11/2013 in accordance with: 29 CFR 1926.1101.
40 CFR 763.121.

The following was performed:

- ☒ Completion and review of the standardized medical questionnaire and work history with special emphasis directed to the pulmonary, cardiovascular, and gastrointestinal systems per Appendix D in 1926.1101.
- ☐ Review of the employer's description of: this employee's duties as they relate to the employee's exposure, the employee's representative or anticipated exposure level, and personal protection equipment to be utilized by the employee.
- ☒ Review of information from previous medical examinations if available.
- ☒ A physical examination with emphasis upon the pulmonary, cardiovascular, and gastrointestinal systems.
- ☒ A pulmonary function test of forced vital capacity (FVC) and forced expiratory volume at one second (FEV 1) in accordance with NIOSH and ATS standards.
- ☐ A chest roentgenogram, posterior-anterior, 14x17 inches (or current film on file) with interpretation in accordance with 29 CFR 1926.1101. (M)(2)(ii)(C).
- ☐ NOTE: According to 29 CFR 1926.1101 (M)(2)(ii)(C), it is up to the discretion of the physician whether or not a chest X-ray is required.
- ☒ The employee was informed by the physician of the results of the exam and of any medical conditions that may result from asbestos exposure including the increased risk of lung cancer attributable to the combined effect of smoking and asbestos exposure.

Unless otherwise noted below, this evaluation indicates that there are no detected medical conditions that would place the employee at an increased risk of material health impairment from exposure to asbestos, and there are no recommended limitations on the employee concerning the use of personal protective equipment or respirator.

**FIT TEST AND RESPIRATOR TRAINING CHECK LIST****PRUEBA DE AJUSTE DEL RESPIRADOR**

The following is a checklist that must be completed for each employee to wear a negative pressure respirator. This form is required every year on all Asbestos or Lead job sites.

I CERTIFY THAT ON THE DATE STATED BELOW I WAS TESTED FOR THE RESPIRATOR TYPE AND MODEL LISTED BELOW. I WAS ALSO GIVEN TRAINING REGARDING THE PROPER USE OF THE RESPIRATOR AND THE MAINTENANCE PROCEDURES REQUIRED.

I FURTHER CERTIFY THAT I UNDERSTAND THE TRAINING PROVIDED TO ME AND KNOW THAT THE USE OF A RESPIRATOR UNDER CONDITIONS CONTRARY TO THOSE OUTLINED AS APPROPRIATE IN THE TRAINING AND TEST SESSION MAY NOT PROVIDE ADEQUATE PROTECTION.

EMPLOYERS ASBESTOS CLEARANCE LETTER

NAME: Mateo Jose S.S.#: XXXXXX 5163
DATE OF EXAM: April 30th 2013 EXP. DATE: April 29th 2014

This letter confirms that the above named individual was examined in compliance with the OSHA asbestos standard (29 CFR 1926 - 1101). The required asbestos questionnaire, a medical and work history, and a complete physical examination were performed. Pulmonary function tests (PFT) were administered.

CHEST X-RAYS: RESULTS: Normal: / Abnormal: _____
Next indicated in 20
PULMONARY FUNCTION TEST RESULTS: Normal: / Abnormal: _____

COMMENTS:

The following conditions were identified which may place this employee at increased risk of health impairment from asbestos exposure:

The following limitations on personal protective equipment, including respirators are indicated:
(☒) None: The patient is medically qualified to wear all personal protection equipment.
(☐) Patient Limitations: _____

The employee has been informed of the results of the medical examination, both with regard to occupation and general medical conditions. The employee has been educated about increased risk of lung cancer. Smokers are advised regarding smoking cessation if indicated in accordance with the standard finding and diagnosis unrelated to asbestos exposure may not be communicated to the employer. Also in accordance with the Standard, a copy of this opinion is being forwarded to the employee.

Thank you for the opportunity to examine this individual.
